(GENE-) GENE LOGIC INC.
Mendrick D, Porter M, Johnson K, Higgs B, Castle A, Elashoff M;
WPI; 2003-148464/14.
Predicting at least one toxic effect of a compound, useful for toxicity modeling, comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database.
Example 4; Page; 446pp; English.
The invention relates to a novel method of predicting at least one toxic effect of a compound. The method comprises a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the renal progression of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease or physiological states, or disease progression. This polynucleotide represents a rat DNA sequence relating to the toxic effect database described in the specification. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the World Intellectual Property Organization

XX
PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-451937/48.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
PT disorders related to the musculoskeletal system including musculoskeletal
PT cancers and also for testing and detection e.g. diagnosis.
XX
XX Example 2; SEQ ID NO 3622; 781pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemia; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer.

Disclosure; SEQ ID NO 3635; 321pp; English.

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid; stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis and limb regeneration; stimulates neuronal growth; can treat and prevent neuronal damage occurring in certain disorders or neurodegenerative conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or

CC bone grafts; prevents skin aging due to sunburn by stimulating
CC keratinocyte growth; prevents hair loss, since FGF family members
CC activate hair-forming cells and promotes melanocyte growth; stimulates
CC growth and differentiation of hematopoietic cells and bone marrow cells
CC when used in combination with other cytokines; maintains organs before
CC transplantation or for supporting cell culture of primary tissues;
CC induces tissue of mesodermal origin to differentiate in early embryos;
CC increases or decreases the differentiation or proliferation of embryonic
CC stem cells, besides, haematopoietic lineage; modulates mammalian
CC characteristics, such as, body height, weight, hair colour, eye colour,
CC skin, percentage of adipose tissue, pigmentation, size, and shape (e.g.,
CC cosmetic surgery); modulates mammalian metabolism; changes mammal's metal
CC state or physical state by influencing biorhythms, circadian rhythms,
CC depression, tendency for violence, tolerance for pain, reproductive
CC capabilities, hormonal or endocrine levels, appetite, libido, memory, or
CC stress; increases or decreases storage capabilities, fat content, lipid,
CC protein, carbohydrate, vitamins, minerals, cofactors or other nutritional
CC components. This sequence encodes a novel human musculoskeletal system
CC antigen. Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?DocID=20020147140

XX
XX New nucleic acid molecule, useful for preparing a medicament for
PT preventing, treating or ameliorating a medical condition e.g., cancer of
PT musculoskeletal tissues or osteoporosis.
XX
XX Disclosure; SEQ ID NO 3622; 289pp; English.
PS
XX The invention relates to a novel isolated musculoskeletal system-
XX associated nucleic acid molecule. The nucleic acid of the invention
CC demonstrates cytostatic and osteopathic activities and may be useful for
CC preparing a medicament for preventing, treating or ameliorating a medical
CC condition such as cancer of the musculoskeletal tissues or osteoporosis,
CC possibly via gene therapy or vaccine production. The current sequence is
CC that of the human musculoskeletal system-associated genomic DNA of the
CC invention. The current sequence is not shown within the specification per
CC se but is available on the USPTO web-site
CC http://seqdata.uspto.gov/sequence.html?DocID=20040009488.

PT cancer (e.g. lymphoma) or for screening agents that may be used for
PT treating or preventing cancer.
XX
XX Disclosure; SEQ ID NO 157; 143pp; English.
XX
XX The present invention describes human cancer-associated (CA) nucleotide
CC sequences (I). Also described: (1) an expression vector comprising (I);
CC (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridizes to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (I) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.
CC The present sequence represents a human CA gene sequence, which is given
CC in the exemplification of the present invention. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
XX Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
XX Disclosure; SEQ ID NO 1422; 199pp; English.
XX
XX The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated genomic DNA of
CC the invention.

PS	Claim 15; SEQ ID NO 9405; 80pp; English.
XX	
CC	The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above,

CC methods of selling and/or licensing single exon probes or microarrays to
CC a customer desiring to measure gene expression, a method of providing
CC human gene expression data by subscription, and a computer-readable
CC storage medium which contains a database having a plurality of records
CC (each record including data on the expression of a single exon probe
CC cited above. The probe, methods and apparatus are useful in gene
CC expression analysis. The probes may be used as tools for surveying
CC tissues to detect the presence of expressed messages that contain their
CC specific exon, or in constructing genome-derived single exon microarrays.
CC In addition, the probes are used in identifying and characterising
CC alternative splicing events, in detecting and characterising gross
CC alterations in the genomic locus that includes their exon, in assessing
CC smaller genomic alterations, in priming the synthesis of nucleic acids,
CC or in expressing the ORF-encoded peptide. The present sequence is a human
CC single exon probe of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at

XX Identifying a stress condition to which a plant cell has been exposed and
PT producing plants with increased tolerance to these abiotic stresses.
XX
PS Claim 144; SEQ ID NO 3478; 577bp + Sequence Listing; English.
XX
CC The invention relates to identifying a stress condition to which a plant
CC cell has been exposed, comprising: (a) contacting nucleic acid
CC representative of expressed polynucleotides in the plant cell with an
CC array or probes representative of the plant cell genome; and (b)
CC detecting a profile of expressed polynucleotides in the plant cell
CC characteristic of a stress response. The method is useful in the
CC production of transgenic plants, cells and seeds and in producing plants

CC with increased tolerance to abiotic stress. The present sequence is that
CC of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used
CC in methods of the invention. Note: The sequence data for this patent is
CC not represented in the printed specification but is based on sequence
CC information supplied to Derwent by the European Patent Office

PT Novel isolated polypeptide associated with breast cancer, useful for
PT detecting presence of polypeptide in sample, as a marker for breast
PT cancer.
XX
PS Disclosure; SEQ ID NO 7215; 36pp; English.

XX The invention relates to an isolated polypeptide (I) associated with a
CC breast cancer which is encoded by a nucleic acid molecule comprising a
CC nucleotide sequence (S1). Further disclosed is an antibody that binds to
CC the polypeptide of the invention. The activity of the polypeptide of the
CC invention may be described as cytostatic. The antibody is useful for
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the
CC invention are useful in the detection of breast tumours. (I) is useful as
CC a marker for breast cancer and in breast cancer therapy. Sequences given
CC in records ACN78851-ACN92934 represent nucleic acid markers associated
CC with breast cancer. Note: The sequence listing does not form part of the
CC specification but may be obtained in electronic format from the USPTO web
CC site at seqdata.uspto.gov/sequence.html?DocID=20030099974

XX
XX Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
XX Claim 1; SEQ ID NO 6892; 44pp; English.
XX
XX The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 9% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

XX
XX A composition comprising a plurality of cDNAs, useful for detecting
PT altered expression of genes in an immunological response or for
PT diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma
PT or osteoarthritis.
XX
XX Claim 1; SEQ ID NO 936; 50pp; English.
XX
XX The invention relates to a composition comprising a plurality of cDNAs
CC for detecting the altered expression of genes in an immunological
CC response. The invention also relates to a method of diagnosing or
CC monitoring the treatment of an immunopathological condition in a sample,
CC comprising obtaining nucleic acids from a sample, contacting the nucleic
CC acids of the sample with an array comprising the plurality of cDNAs under
CC conditions to form one or more hybridisation complexes, detecting the
CC hybridisation complexes and comparing the levels of the detected
CC hybridisation complexes with the level of hybridisation complexes
CC detected in a non-diseased sample, where an altered level of the detected
CC hybridisation complexes correlates with the presence of an
CC immunopathological condition. Also disclosed are an expression profile
CC comprising a microarray and a plurality of detectable complexes and a
CC method for identifying a plurality of polynucleotide probes. The cDNAs
CC are useful as hybridisable array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray can be used in
CC the diagnosis of an immunopathology, such as Crohn's disease, asthma,
CC ulcerative colitis, hyperesoinophilia, irritable bowel syndrome,
CC osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in
CC identifying agents for the treatment of the diseases. The microarray may
CC also be used in drug discovery and development, toxicological and
CC carcinogenicity studies, forensics or pharmacogenomics. The composition
CC may also be used in purification of a subpopulation of mRNAs, cDNAs or
CC genomic fragments. This sequence represents a human cDNA of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html.

 XX PT New recombinant DNA construct comprising a promoter positioned to provide
 PT for expression of a polynucleotide encoding a polypeptide from a
 PT microbial source, useful for producing plants with improved properties.
 XX Claim 1; SEQ ID NO 46352; 122pp; English.
 XX CC The invention relates to a recombinant DNA construct comprising a
 CC promoter functional in a plant cell, where the promoter is positioned to
 CC provide for expression of a polynucleotide encoding a polypeptide from a
 CC microbial source. The invention also relates to a transformed plant
 CC comprising the recombinant DNA construct and a method of producing a
 CC transformed plant having an improved property. The plant is a crop plant
 CC such as maize or soybean. The method of producing a transformed plant
 CC having an improved property comprises transforming a plant with the
 CC recombinant DNA construct and growing the transformed plant, where the
 CC polynucleotide or polypeptide is useful for improving plant properties.
 CC The recombinant DNA construct is useful for producing plants with
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
 CC increased resistance to plant disease, better growth rate by modification
 CC of the cell cycle pathway with plant growth regulators, increased rate of
 CC homologous recombination, modified seed oil or protein yield and/or
 CC content, improved yield by modification of carbohydrate, nitrogen or
 CC phosphorus use and/or uptake, by modification of photosynthesis or by
 CC providing improved plant growth and development under at least one stress
 CC condition, improved lignin production or improved galactomannan
 CC production. This sequence represents a bacterial polynucleotide used in
 CC the scope of the invention. Note: The sequence data for this patent did
 CC not form part of the printed specification but was obtained in electronic
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX use as diagnostic agents and in screening for therapeutic agents.

PS Claim 1; SEQ ID NO 53; 28pp; German.

XX The invention relates to a novel human nucleic acid sequence of the
CC pancreas and its encoded protein. The invention further comprises:
CC proteins and peptides, preferably isolated, that contain a sequence
CC encoded by the novel nucleic acid; and methods for diagnosis and
CC treatment of pancreatic cancer; using a substance that inhibits or binds
CC to the protein or its DNA, including: an antisense oligonucleotide, short
CC interfering RNA or ribozyme directed against the pancreatic protein, an
CC organic molecule, particularly having a molecular weight below 5000,
CC especially 300, that binds to the pancreatic DNA, an aptamer or
CC (monoclonal) antibody, preferably human or humanized, that binds to the
CC pancreatic DNA, or an anti-idiotypic antibody raised against the
CC monoclonal antibody, any of which may be derivatized with a reporter
CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
CC human pancreatic proteins and their encoding DNA have cytostatic
CC activity. The novel sequences are useful for inhibiting transcription
CC and/or expression of genes and proteins associated with pancreatic
CC cancer. This polynucleotide sequence represents the DNA encoding one of
CC the novel human pancreatic proteins of the invention. Note: This sequence
CC is not shown in the specification, it has been electronically downloaded
CC from a DVD-ROM provided with this specification by the European Patent
CC Office.

XX proteins regulated by ISP.

XX

PS Disclosure; SEQ ID NO 586; 70pp; English.

XX The present invention relates to a method for treating, preventing or
CC ameliorating pathological conditions associated with dysregulation of the
CC insulin signaling pathway (ISP). The method comprises administering to a
CC subject a modulator for ISP-regulated proteins or a pharmaceutical
CC composition comprising the described modulator. The method is useful for
CC treating, preventing or ameliorating pathological conditions associated
CC with dysregulation of the ISP such as Type II diabetes or Type A syndrome
CC of insulin resistance. The present sequence is a human homolog of a
CC Drosophila gene regulated by ISP. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from USPTO at

 PT sativa, Saccharomyces cerevisiae, and Papaver rhoeas, useful for
 PT conferring altered visual phenotypes in plants.
 XX
 PS Claim 1; SEQ ID NO 1129; 517pp; English.
 XX
 CC This invention relates to the identification and isolation of novel
 CC nucleic acid molecules that confer altered visual phenotypes in plants.
 CC Specifically, it refers to modifications of plant architecture and/ or
 CC leaf surface features in plants, such as chlorotic, bleaching, etching,
 CC wet leaf, stunting, elongation and texture phenotypes, which are thought
 CC will be agronomic traits beneficial to the farmer. As such, these novel
 CC phenotypes can affect growth regulation i.e. useful for creating dwarf
 CC varieties, exhibit resistance to insects or heat stress, confer changes
 CC in pigment content such that plants have enhanced vitamin production or
 CC delayed senescence and also for example produce plants that control the
 CC production of ethylene. Furthermore, the present invention comprises
 CC generating transgenic plants, as well as reproducibly altering the visual
 CC phenotype of plant seeds, plant tissues and plant cells containing the
 CC polynucleotides described herein. This polynucleotide is a homologue of a
 CC DNA sequence that confers an altered visual phenotype when expressed in
 CC plants, the method of the invention.

 PT sativa, Saccharomyces cerevisiae, Trichoderma harzianum and Papaver
 PT rhoeas, useful for conferring disease resistance in plants.
 XX
 PS Claim 1; SEQ ID NO 1718; 617pp; English.
 XX
 CC The invention relates to a novel isolated nucleic acid derived from
 CC Nicotiana benthamiana, Oryza sativa (rice), Saccharomyces cerevisiae
 CC (yeast), Trichoderma harzianum (Hypocrea lixii) and Papaver rhoeas
 CC (poppy) and a sequence that hybridises to them under conditions of low
 CC stringency, where expression of the nucleic acid in a plant results in a
 CC disease resistance phenotype. The polynucleotides of the invention
 CC demonstrate anti-fungal activity and may be useful in conferring disease
 CC resistance in a plant against phytopathogen such as Aspergillus flavus,
 CC Gibberella fujikuroi and Gibberella zeae. Furthermore, the
 CC polynucleotides may be useful to retrieve unknown sequences and in gene
 CC shuffling or sexual PCR procedures. The current sequence is that of the
 CC DNA of the invention which is homologous to that of the phytopathogen
 CC resistance-related contig cDNAs.

XX Novel isolated nucleic acid derived from *Nicotiana benthamiana*, *Oryzae*
PT *sativa*, *Saccharomyces cerevisiae*, *Trichoderma harzianum* and *Papaver*
PT *rheas*, useful for conferring disease resistance in plants.
XX
PS Claim 1; SEQ ID NO 774; 617pp; English.
XX
CC The invention relates to a novel isolated nucleic acid derived from
CC *Nicotiana benthamiana*, *Oryza sativa* (rice), *Saccharomyces cerevisiae*
CC (yeast), *Trichoderma harzianum* (*Hypocrea lixii*) and *Papaver rhoeas*
CC (poppy) and a sequence that hybridises to them under conditions of low
CC stringency, where expression of the nucleic acid in a plant results in a
CC disease resistance phenotype. The polynucleotides of the invention
CC demonstrate anti-fungal activity and may be useful in conferring disease
CC resistance in a plant against phytopathogens such as *Aspergillus flavus*,
CC *Gibberella fujikuroi* and *Gibberella zeae*. Furthermore, the
CC polynucleotides may be useful to retrieve unknown sequences and in gene
CC shuffling or sexual PCR procedures. The current sequence is that of the
CC DNA of the invention which is homologous to that of the phytopathogen
CC resistance-related contig cDNAs.

XX
XX New nucleic acid molecule, useful for diagnosing or treating prostate
PT cancer.
XX
XX Disclosure; SEQ ID NO 199; 99pp; English.
PS
XX The invention relates to newly discovered cancer markers associated with
CC the cancerous state of prostate cells. Also disclosed is a method of

CC assessing whether a patient is afflicted with prostate cancer. The method
CC of the invention involves assessing whether a patient is afflicted with
CC prostate cancer by comparing the level of expression of a marker in a
CC patient sample and the normal level of expression of the marker in a
CC control non-prostate cancer sample, where a significant increase in the
CC level of expression of the marker in the patient sample and the normal
CC level indicates that the patient is afflicted with prostate cancer.
CC Nucleic acids of the invention are useful for diagnosing or treating
CC prostate cancer, and may be useful in gene therapy. Sequences given in
CC ADB75177-ADB75631 represent marker cDNA and proteins. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX New nucleic acid encoding mutant protein involved in synaptogenesis,
PT useful for treatment and diagnosis of e.g. autism, Asperger syndrome, and
PT schizophrenia.
XX Claim 10; SEQ ID NO 1; 416pp; French.
XX The invention relates to an isolated or purified polynucleotide encoding
CC a polypeptide (the wild-type form of which is involved in synaptogenesis)
CC that includes at least one mutation associated with development of
CC neurological disease and/or a predisposition to development of mental
CC disorders or psychiatric illness. The polypeptide are used to screen for
CC agents that modulate their activity. Also nucleic acid, polypeptide,
CC polypeptide-specific antibodies, vectors containing he nucleic acid and
CC host cells containing the vector, are useful as pharmaceuticals for
CC treating mental and neurological disorders, specifically autism, Asperger
CC syndrome, schizophrenia and attention deficit hyperactivity disorder. The
CC wild-type forms of the nucleic acid and polypeptide can be used
CC similarly. Also detecting mutations in the nucleic acid and polypeptide,
CC or measuring activity of the polypeptide, can be used to detect
CC biochemical disorders that affect formation of synapses and to diagnose
CC mental disease. This sequence corresponds to the genomic sequence of the
CC human wild type HNL4X gene.

XX New nucleic acid that is a 5' expressed sequence tag (5' EST) for
PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for
PT diagnostic, forensic, gene therapy and chromosome mapping procedures.
XX

PS Claim 1; SEQ ID NO 17420; 71pp + Sequence Listing; English.
XX The present sequence is one of a large number of 5' ESTs derived from
CC mRNAs encoding secreted proteins. No ORF has yet been conclusively
CC identified within the present sequence. The 5' ESTs were prepared from
CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
CC sequences usually correspond mainly to the 3' untranslated region (UTR)
CC of the mRNA because they are often obtained from oligo-dT primed cDNA
CC libraries. Such ESTs are not well suited for isolating cDNA sequences
CC derived from the 5' ends of mRNAs and even in those cases where longer
CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used
CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
CC diagnostic, forensic, gene therapy and chromosome mapping procedures.
CC They are used to obtain upstream regulatory sequences and to design
CC expression and secretion vectors

XX New flea protease genes and proteins - used in vaccine compositions for
PT the prophylaxis and treatment of flea infestation, especially in cats or
PT dogs.
XX Claim 1; Page 259; 318pp; English.
XX The present sequence is a DNA sequence from a novel flea serine protease.
CC The protease, its mimetopes, antibodies (Ab) and inhibitors of the
CC protein, as well as the DNA encoding the protein, may all be used in
CC therapeutic compositions to reduce flea protease activity (especially
CC immunoglobulin protease) and so reduce flea infestation, especially in
CC cats or dogs. Alternatively, flea larvae may ingest the faeces of adult
CC

CC fleas which comprises anti-protease antibodies produced by a host animal
 CC in response to administration of the protein. Therapeutic compositions
 CC may further comprise a compound that reduces haematophagous ectoparasite
 CC burden by a method other than by reducing flea immunoglobulin protease
 CC activity. The novel flea DNA encoding the protein can also be used to
 CC produce recombinant protein, and fragments of it are used as probes and
 CC primers for identification and isolation of related sequences, also as
 CC antisense, triplex-forming agents and ribozymes for inhibition of the
 CC synthesis of the protein. Ab are also useful for screening expression
 CC libraries, to purify the protein and to target cytotoxins to fleas.

XX New isolated flea proteins with proteolytic activity, useful for
 PT preventing and reducing flea infestations in mammals especially cats and
 PT dogs.

XX Claim 4; Col 153-154; 150pp; English.

XX The present invention describes isolated flea serine protease,
 CC aminopeptidase and cysteine protease proteins (I). Also described is a
 CC method for identifying a compound (II) capable of inhibiting flea
 CC protease activity comprising: (a) contacting (I) with a protease
 CC substrate and a putative inhibitory compound, where (I) has proteolytic

CC activity in the absence of the compound; and (b) determining if the
 CC compound inhibits protease activity by detecting cleavage of the protease
 CC substrates; where decreased cleavage of the protease substrate indicates
 CC an inhibitory compound. (I), nucleic acid molecules encoding (I), and
 CC antibodies immunospecific for (I) and (II) are useful for preventing and
 CC reducing flea infestations, particularly the species Ctenocephalides
 CC felis (cat fleas), Ctenocephalides canis (dog fleas) and Pulex irritans,
 CC in animals, preferably cats and dogs. They are also useful for reducing
 CC infestation by other ectoparasites, preferably mosquitoes, midges,
 CC sandflies, blackflies, ticks and Rhodnius. AAC90818 to AAC90913 and

XX Polynucleotide library used to determine cancerous states of mammalian
 PT cells.

XX Claim 1; Page 275; 1097pp; English.

XX AAA00010 to AAA02716 represent polynucleotides isolated from cDNA
 CC libraries constructed from human colon cancer cell lines. The present
 CC invention also describes a method of detecting differentially expressed
 CC genes correlated with a cancerous state of a mammalian cell, comprising
 CC detecting at least one differentially expressed gene product in a test

CC sample derived from a cell suspected of being cancerous, where detection
CC of the differentially expressed gene product is correlated with a
CC cancerous state of the cell from which the test sample was derived. The
CC polynucleotide sequences can be used in a method for detecting
CC differentially expressed genes correlated with a cancerous state of a
CC mammalian cell. The polynucleotides can also be used as probes for
CC detecting and mapping related genes. They can be used in diagnosis and
CC prognosis of diseases and disorders (e.g. identification of pre-
CC metastatic or metastatic cancerous states, stages of cancer, or
CC responsiveness of cancer to therapy). This is particularly for breast
CC cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-
CC negative breast cancer, lung cancer, and colon cancer

DR
XX Library of polynucleotides for diagnosing a cancerous state of a
PT mammalian cell and detecting cancer, particularly of the colon or
PT prostate, comprises 3351 human polynucleotide sequences.
PT
XX Claim 9; Page 784; 1046pp; English.
PS
XX The present sequence is one of 3351 sequences in a library of human
CC polynucleotides. The library is used to detect differentially expressed
CC genes correlated with a cancerous state of a mammalian cell and can
CC detect colon, prostate, breast and lung cancer. The library can be used
CC to produce probes for detection of mRNA and to produce additional copies
CC of the polynucleotides. The probes can be used for chromosome mapping of
CC the polynucleotide and for detection of transcription levels. Ribozymes
CC or antisense oligonucleotides can be generated. The polynucleotides and
CC their gene products are used as genetic or biochemical markers (e.g. in

CC blood or tissues) that will detect the earliest changes along the
CC carcinogenesis pathway and/or monitor the efficacy of therapies and
CC preventive interventions. The polynucleotides, polypeptides and
CC antibodies against them can be used in pharmaceutical compositions to
CC treat the cancers and proliferative disorders such as neoplasia,
CC dysplasia and hyperplasia

PT New isolated polynucleotides, which are differentially expressed in colon
PT cancer cell, useful for treating cancer, e.g. colon cancer, breast
PT cancer, or pancreatic cancer.
XX
PS Claim 1; SEQ ID NO 9291; 97pp; English.
XX
CC The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC are differentially expressed in colon cancer cells. The invention also
CC relates to vectors and host cells comprising a differentially expressed
CC polynucleotide of the invention; a method for detecting a cancerous cell
CC by detection of a gene product of the polynucleotides; a method for
CC inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC of the polynucleotides; a method of treating an individual with cancer by
CC administration of a modulator of a gene product of the polynucleotides;
CC and an isolated antibody that specifically binds to a polypeptide encoded
CC by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC antibodies, and methods are useful for the detection of cancerous cells;
CC for the diagnosis, prognosis and management of cancer; for the
CC identification of agents that modulate the phenotype of cancerous cells;
CC for the identification of therapeutic targets for cancer chemotherapy;
CC and for the treatment of cancer, especially colon cancer and metastasized
CC colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC are also useful as a source of probes or primers for use in diagnostic
CC methods. The differentially expressed polynucleotides or their encoded
CC proteins can additionally be used as vaccines to modulate primary immune
CC responses for the prevention or treatment of cancer. The present sequence
CC represents a specifically claimed polynucleotide which is differentially
CC expressed in colon cancer. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues. First strand cDNA was primed with a primer
[5'-GAGAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTNN 3'], cDNA was
prepared by using trehalose thermo-activated reverse transcriptase
and subsequently trehalose for full-length by cap-trapper. Second
strand cDNA was prepared with the primer adapter of sequence [5',
GAGAGAGAGCGCCGCAATTATTCGATTAAATTAATTAATCCCCCCC 3']. cDNA
was cleaved with XhoI and SstI. Cloning sites, 5' end: XhoI; 3'
end: SstI. Host: SOLR.

Clones are derived from the porcine BAC library RPCI-44

(<http://www.bacpac.chori.org/porcine242.htm>). For BAC library availability, please contact Pieter de Jong (pdejong@chori.org). Clones may be purchased from BACPAC Resources (<http://BACPACorders.chori.org>). This work was undertaken as part of the International Swine Genome Sequencing Consortium by the University of Illinois at Urbana Champaign, USA with funds provided by grant No. AG2002-34480-11828 from USDA-CSREES and AG2001-35205-09965 from USDA/NRI (Livestock Genome Sequencing Initiative)

Plate: 270 row: F column: 2

Seq primer: SP6

/notes="Vector: Express 1; Total and poly A+ RNA was isolated from the indicated stickleback tissue, and a cDNA library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp linker primer containing an oligodT sequence preceded by a synthetic NotI site (first strand primer: 5'-GACTAGTCTAGATCGGCGCGCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NotI and EcoRV sites of Express 1. Note that the EcoRV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where ATC is the second half of the EcoRV site, and xxx is derived from the cDNA sequence). A map of the Express 1 vector is available at:
<http://www.openbiosystems.com/cdna.library.constructionfaq.php#8>
The primary library was transformed and amplified in DH10B (T1 phage resistant) bacteria. Clones available from Open Biosystems:

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
non-normalized rat eye library cDNA Library Preparation: M.B.
Soares Lab Clone distribution: clones will be available through

/lab_host="DH10B (Life Technologies)"
/clone_lib="UI-R-AI"
/notes="Vector: pT73D-Pac (Pharmacia) with a modified
polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-AI
library is a subtracted library derived from the UI-R-AI
library. The UI-R-AI library consisted of a mixture of
individually tagged normalized libraries constructed from
rat placenta, adult lung, brain, liver, kidney, heart,
spleen, ovary, and muscle. The tag is a string of 3-5'
nucleotides present between the Not I site and the
oligo-dT track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-AI) was constructed as follows: PCR
amplified cDNA inserts from a pool of approximately 3,840
UI-R-AI clones from which 3' ESTs had been derived was
used as a driver in a hybridization with the UI-R-AI
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DH10B bacteria (Life Technologies) to generate the
UI-R-AI library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research 6:
791-806, 1996)"

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized rat eye library cDNA Library Preparation: M.B. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT

2 (bases 1 to 246494)
Worley,K.C.
Direct Submission
Submitted (07-MAY-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 246494)
Rat Genome Sequencing Consortium.
Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 15, 2002 this sequence version replaced gi:23611251.

The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Summary Statistics

Assembly program: Phrap; version 0.990329

Consensus quality: 202515 bases at least Q40

Consensus quality: 207572 bases at least Q30

Consensus quality: 211369 bases at least Q20

Estimated insert size: 205757; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 15 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

Submitted (07-APR-2005) The Institute for Genomic Research, 9712

Medical Center Dr, Rockville, MD 20850, USA, nelsayed@tigr.org

On Apr 7, 2005 this sequence version replaced gi:19774505.

BAC clone RPI93-27M3 from Trypanosoma brucei chromosome 5.

Putative protein coding regions (>30 codons) were predicted by

combining the output of the gene finding algorithm GLIMMER with

similarity data and manual annotation of open reading frames.

Further refinement of gene models (additions, deletions and

alterations to boundary coordinates) were done manually based on

detailed comparisons with the T. cruzi and L. major genomes. Genes

on BACs were assigned a systematic name based on the chromosome and

the BAC from which they originated (e.g. Tb03.27F10.410). Gene

products were assigned a putative function when they shared

significant similarity with experimentally characterized gene

products or when they contained functionally known protein domains.

Gene products were labelled either 'hypothetical protein', or

'hypothetical protein, conserved' in the case of products showing

significant similarity with proteins of domains of unknown function

from other organisms. Gene products of unknown function with

predicted orthologs in Trypanosoma cruzi and Leishmania major

genomes were automatically classified as conserved proteins. Short

predicted coding sequences (less than 150 codons) with no additional evidence of coding potential were labelled 'hypothetical protein, unlikely'.

Direct Submission
Submitted (18-JUN-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jun 18, 2005 this sequence version replaced gi:60735107.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.950319
Consensus quality: 162694 bases at least Q40
Consensus quality: 162942 bases at least Q30
Consensus quality: 163053 bases at least Q20
Insert size: 149000; agarose-fp
Insert size: 163116; sum-of-contigs
Quality coverage: 11.40x in Q20 bases; agarose-fp
Quality coverage: 10.42x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 10164: contig of 10164 bp in length
* 10165 10264: gap of unknown length
* 10265 13805: contig of 3541 bp in length
* 13806 13905: gap of unknown length
* 13906 16621: contig of 2716 bp in length
* 16622 16721: gap of unknown length
* 16722 60680: contig of 43959 bp in length
* 60681 60780: gap of unknown length
* 60781 78425: contig of 17645 bp in length
* 78426 78526: gap of unknown length
* 78527 100161: contig of 21636 bp in length
* 100162 100261: gap of unknown length
* 100262 103084: contig of 2823 bp in length
* 103085 103184: gap of unknown length
* 103185 105651: contig of 2467 bp in length
* 105652 105751: gap of unknown length
* 105752 163916: contig of 58165 bp in length.

BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST Gallus gallus cDNA

sequencing project.
This sequence is from the
BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,
from a library constructed by Elizabeth Bosch. cDNA was prepared
from RNA extracted from chondrocytes isolated from growth plates,
normalised,
and poly A-trimmed. EcoRI-NotI cut cDNA was then ligated into the
vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI
Host: Escherichia coli DH10B.

* NOTE: This record contains 81 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

AP008216_173	17300001	17410000	COMMENT	On Jan 5, 2001 this sequence version replaced gi:12025621.
AP008216_174	17400001	17510000		Address all correspondence to:rice@tigr.org
AP008216_175	17500001	17610000		BAC clone OSJNBa0056G17 is from Oryza sativa chromosome 10
AP008216_176	17600001	17710000		The orientation of the sequence is from SP6 to T7 end of the BAC
AP008216_177	17700001	17810000		clone.
AP008216_178	17800001	17910000		Genes were identified by a combination of several methods: Gene
AP008216_179	17900001	18010000		prediction programs including Genscan and Genscan+ (Chris Burge,
AP008216_180	18000001	18110000		http://CCR-081.mit.edu/GENSCAN.html), GeneMarkHM (Mark Borodovsky,
AP008216_181	18100001	18210000		http://genemark.biology.gatech.edu/GeneMark/), Fgenesh
AP008216_182	18200001	18310000		(http://www.softberry.com/), and GeneSplicer (Mihaela Pertea and
AP008216_183	18300001	18410000		Steven Salzberg, contact mpertea@tigr.org), searches of the
AP008216_184	18400001	18510000		complete sequence against a peptide database and the plant EST
AP008216_185	18500001	18610000		database at TIGR (http://www.tigr.org/tdb/cgi.shtml). Annotated
AP008216_186	18600001	18710000		genes are named to indicate the level of evidence for their
AP008216_187	18700001	18810000		annotation. Genes with similarity to other proteins are named after
AP008216_188	18800001	18910000		the database hits. Genes without significant peptide similarity but
AP008216_189	18900001	19010000		with EST similarity are named as unknown proteins. Genes without
AP008216_190	19000001	19110000		protein or EST similarity, that are predicted by more than two gene
AP008216_191	19100001	19210000		prediction programs over most of their length are annotated as
AP008216_192	19200001	19310000		hypothetical proteins. Genes encoding tRNAs are predicted by
AP008216_193	19300001	19410000		hypothetical proteins. Genes encoding tRNAs are predicted by
AP008216_194	19400001	19510000		tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).
AP008216_195	19500001	19610000		Simple repeats are identified by repeatmasker (Arian Smit,
AP008216_196	19600001	19710000		http://ftp.genome.washington.edu/RM/RepeatMasker.html).

-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 115320: contig of 115320 bp in length
* 115321 115420: gap of unknown length
* 115421 157085: contig of 41665 bp in length.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep/RP23-86013 is
from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

Baylor Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 29, 2005 this sequence version replaced gi:66796257.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

3 (bases 1 to 236746)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 6, 2002 this sequence version replaced gi:23811730.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.
----- Genome Center
Center: Baylor College of Medicine
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GUOA
Center clone name: CH230-342E8
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 172218 bases at least Q40
Consensus quality: 174486 bases at least Q30
Consensus quality: 175960 bases at least Q20
Estimated insert size: 174258; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 236746: contig of 236746 bp in length.

Direct Submission
Submitted (01-APR-2004) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.

Contact: zfish-help@sanger.ac.uk
----- Project Information
Center project name: zC63J24
----- Summary Statistics
Assembly program: XGAP4; version 4.5
Chemistry: Dye-terminator; 100% of reads
Consensus quality: 158405 bases at least Q40
Consensus quality: 158417 bases at least Q30
Consensus quality: 158419 bases at least Q20
Insert size: 158420; sum-of-contigs
Insert size: 168521; 6.4% error; agarose-fp
Quality coverage: 8.66x in Q20 bases; sum-of-contigs Quality
coverage: 8.20x in Q20 bases; agarose-fp
-----
* NOTE: This is a 'working draft' sequence.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

----- Project Information
Center project name: chr-3
Center clone name: RP11-72112 (bc0748)
----- Summary Statistics
Sequencing vector: plasmid; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 150288 bases at least Q40
Consensus quality: 150310 bases at least Q30
Consensus quality: 150313 bases at least Q20
Insert size: 150313; sum-of-contigs
Quality coverage: 7.8x in Q20 bases; sum-of-contigs

Overlapping Sequences:
5': RP11-14762 (UWGC:bc0804) AC132807, 66478-bp overlap
3': RP11-554B20 (UWGC:bc0471) AC099543, 59734-bp overlap

Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear

The sequence in this assembly is a combination of BAC based reads					
and whole genome shotgun sequencing reads assembled using Atlas					
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the					
sequence may extend beyond the ends of the clone and there may be					
contigs that consist entirely of whole genome shotgun sequence					
reads. Both end sequences and whole genome shotgun sequence only					
contigs will be indicated in the feature table.

AX954557/c
LOCUS AX954557 2347 bp DNA linear PAT 08-JAN-2004
DEFINITION Sequence 23 from Patent WO03093453.
ACCESSION AX954557
VERSION AX954557.1 GI:40783930
KEYWORDS
SOURCE Bacillus licheniformis
ORGANISM Bacillus licheniformis
Bacteria; Firmicutes; Bacillales; Bacillaceae; Bacillus.
REFERENCE 1
AUTHORS Andersen,J.T., j Rgensen,S.T., Rasmussen,M.D., Olsen,P.B. and
Clausen,I.G.
TITLES Improved bacillus host cell
JOURNAL Patent: WO 03093453-A 23 13-NOV-2003;
Novozymes A/S (DK)

XX Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA.

XX Claim 12; 56pp + Sequence Listing; 56pp; German.

XX This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ1410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention

XX PT Determining the degree of cytosine methylation in genomic DNA, useful for
PT diagnosis and prognosis, comprises selective hybridization of amplicons
PT from chemically treated DNA.

XX PS Claim 12; 56pp + Sequence Listing; 56pp; German.

XX CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on
CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's); and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. ABQ13410-
CC ABQ54121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

XX Nucleic acid array containing Xenopus embryonic nucleic acids is useful
PT to identify genes involved in embryonic development, to identify
PT different types of embryonic cells, and to diagnose developmental
PT disorders.

XX Claim 1; Page 42; 823pp; English.

XX CC The invention relates to a nucleic acid array, where each coordinate
CC contains a single nucleic acid species having one of 770 nucleotide
CC sequences (appearing as ABS76747-ABS77516) a of a Xenopus embryonic gene
CC product, or its complement or hybridisable fragment of not less than 20
CC contiguous nucleotides of one of those sequences. Also included are
CC detecting differential expression of embryonic genes, comprising: (a)
CC contacting a nucleic acid array comprising genes expressed in embryonic
CC but not mature cells with nucleic acids from sample and control cells;
CC and (b) detecting differential hybridisation of nucleic acids from the
CC sample cells relative to the control cells; and detecting defects in
CC development, comprising: (a) contacting nucleic acids from test cells
CC undergoing development with a nucleic acid array of gene products known
CC to play a fundamental role in the development process; and (b) detecting
CC a difference in expression of a fundamental gene in the sample cells
CC relative to a standard. The invention is useful to identify genes
CC involved in embryonic development and related processes such as cell
CC differentiation. This would be useful for diagnosing developmental
CC disorders and for identifying different types of embryonic cells. The
CC present sequence is one of the 770 Xenopus embryonic cDNA sequences

XX Monitoring differential expression of several genes in first Bacillus
PT cell relative to expression of same genes in one or more second Bacillus
PT cells, by using substrate containing Bacillus genomic sequenced tag
PT array.
XX Claim 4; SEQ ID NO 893; 200pp; English.
XX The invention describes a method of monitoring differential expression of
CC genes in a first Bacillus cell relative to expression of the genes in
CC other Bacillus cells, comprising hybridising labelled nucleic acid probes
CC isolated from Bacillus cells to a substrate containing array of Bacillus
CC genomic sequenced tags (GST), examining the array, and determining
XX relative gene expression by an observed hybridisation reporter signal of
a spot in the array. The method is useful for measuring the expression of
genes in a first Bacillus cell relative to expression of the same genes
in one or more second Bacillus cells. The method is useful for monitoring
global expression of several genes from a Bacillus cell, discovering new
genes, identifying possible functions of unknown open reading frames and
monitoring gene copy number variation and stability. Monitoring changes
in expression of genes may be used to provide a representation of the way
in which Bacillus cells adapt to changes in culture conditions,
environmental stress or other physiological provocation. Extensive follow
up characterisation is unnecessary, when one spot on an array equals one
gene or one open reading frame, since sequence information is available.
This sequence represents a genomic sequence tag (GST) used in the method
of the invention. Note: The sequence data for this patent did not form
part of the printed specification, but was obtained in electronic format
directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New mutant Bacillus licheniformis host cell secreting 5 % less of one or
PT more secreted polypeptides than the parent host cell, useful for
PT producing a product of interest e.g. polypeptides, amino acids or
PT carbohydrates.
XX Disclosure; SEQ ID NO 23; 422pp; English.
XX This invention relates to a novel Bacillus licheniformis (B.
CC licheniformis) mutant host cell derived from a parent B. licheniformis
CC host cell that is mutated in genes encoding secreted polypeptides. host
CC Specifically, it refers to the generation of an improved Bacillus host
CC that reduces the need for product purification caused by contaminant
CC secreted native polypeptides in the culture medium. Accordingly, the
CC present invention describes reducing the expression of these native

CC proteins (e.g. proteolytic enzymes, nutrient uptake factors and signal
CC molecules), which in turn makes it easier to purify the heterologous
CC product of interest and therefore improving the production process.
CC Further benefits of a mutated host cell include an increase in total
CC production yield and a longevity of shelf life attributable to improved
CC product stability and purity. This polynucleotide is a DNA sequence
CC encoding a mutant B. licheniformis secreted polypeptide of the invention.

XX Determining the degree of cytosine methylation in genomic DNA, useful for
 PT diagnosis and prognosis, comprises selective hybridization of amplicons
 PT from chemically treated DNA.

XX Claim 12; 56pp + Sequence Listing; 56pp; German.

XX This invention describes a novel method for determining the degree of
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
 CC genomic sample of DNA. The sample is treated chemically to convert
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic
 CC DNA that contains the target C is amplified to form a labeled amplicon.
 CC The amplicon is hybridised to two classes, each with at least one member,
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the

CC degree of hybridisation to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridised to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABQ13410-
 CC ABQ54121 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

PT Determining the degree of cytosine methylation in genomic DNA, useful for
 PT diagnosis and prognosis, comprises selective hybridization of amplicons
 PT from chemically treated DNA.

XX Claim 12; 56pp + Sequence Listing; 56pp; German.

XX This invention describes a novel method for determining the degree of
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
 CC genomic sample of DNA. The sample is treated chemically to convert
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic
 CC DNA that contains the target C is amplified to form a labeled amplicon.
 CC The amplicon is hybridised to two classes, each with at least one member,
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
 CC degree of hybridisation to both classes is determined from the label on
 CC the amplicon. From the ratio of labels hybridised to the two classes of
 CC oligomers, the degree of methylation is calculated. The method is used:

CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
 CC and of a wide range of diseases, e.g. cancer, disorders of the central
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
 CC particularly by detecting mutations or single nucleotide polymorphisms
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for
 CC investigating cell differentiation. The method allows the methylation
 CC status of many C residues to be determined simultaneously. ABQ13410-
 CC ABQ54121 represent genomic DNA sequences used to illustrate the method
 CC for determining the degree of cytosine methylation described in the
 CC disclosure of the invention

 DR
 XX New recombinant DNA construct comprising a promoter positioned to provide
 PT for expression of a polynucleotide encoding a polypeptide from a
 PT microbial source, useful for producing plants with improved properties.
 XX
 XX Claim 1; SEQ ID NO 43475; 122pp; English.
 PS
 XX The invention relates to a recombinant DNA construct comprising a
 CC promoter functional in a plant cell, where the promoter is positioned to
 CC provide for expression of a polynucleotide encoding a polypeptide from a
 CC microbial source. The invention also relates to a transformed plant
 CC comprising the recombinant DNA construct and a method of producing a
 CC transformed plant having an improved property. The plant is a crop plant
 CC such as maize or soybean. The method of producing a transformed plant
 CC having an improved property comprises transforming a plant with the
 CC recombinant DNA construct and growing the transformed plant, where the
 CC polynucleotide or polypeptide is useful for improving plant properties.
 CC The recombinant DNA construct is useful for producing plants with
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
 CC increased resistance to plant disease, better growth rate by modification
 CC of the cell cycle pathway with plant growth regulators, increased rate of
 CC homologous recombination, modified seed oil or protein yield and/or
 CC content, improved yield by modification of carbohydrate, nitrogen or
 CC phosphorus use and/or uptake, by modification of photosynthesis or by
 CC providing improved plant growth and development under at least one stress
 CC condition, improved lignin production or improved galactomannan
 CC production. This sequence represents a bacterial polynucleotide used in
 CC the scope of the invention. Note: The sequence data for this patent did
 CC not form part of the printed specification but was obtained in electronic
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

 DR
 XX New stress-responsive nucleic acid, useful for altering the
 PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
 PT stress, salt stress or osmotic stress.
 XX
 XX Claim 48; SEQ ID NO 17318; 89pp; English.
 PS
 XX The invention relates to novel abiotic stress responsive polynucleotides
 CC and polypeptides. Also disclosed are vectors, expression cassettes, host
 CC cells, and plants containing such polynucleotides. Also disclosed are
 CC methods for using the polynucleotides and polypeptides to alter the
 CC responsiveness of a plant to abiotic stress. The invention is useful in
 CC agriculture. The nucleic acid is useful for determining whether a test
 CC plant has been exposed to an abiotic stress condition. It is also useful
 CC for selecting an agent that alters abiotic stress regulated
 CC polynucleotide expression in a plant cell, and to identify a homolog or
 CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
 CC molecule and the polypeptide encoded by it are useful in altering the
 CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
 CC stress, osmotic stress or any of their combinations. The present sequence
 CC is used in the exemplification of the invention

XX
XX Identification of sequences homologous to a transposable element in genes
PT of a plant such as rice for screening genes expressed in particular
PT organs of the plant including the flower.
XX
XX Disclosure; Page 127-131; 147pp; Japanese.
XX
XX The invention comprises a method of estimating gene expression in a
CC chosen organ of a plant. The method involves searching sequences in the
CC neighbourhood of putative protein-encoding regions of genes expressed in
CC the organ which are homologous to a known transposon key sequence, and
CC then selecting for genes in which these sequences are present. The method
CC of the invention is useful for establishing the pattern of gene
CC expression in particular organs of a plant (e.g. the flower) in
CC connection with the improvement of varieties of rice and other plants and
CC modification of the structural form and appearance of flowers. The
CC present DNA sequence was used in the exemplification of the invention.

XX New isolated nucleic acid molecule useful for prevention, treatment or
PT amelioration of a medical condition, e.g. inflammatory bowel disease.
PT
XX

PS Claim 1; Page 111; 128pp; English.
XX
XX AAF44471 to AAF44532 represent expressed sequences tags (ESTs) isolated
CC from a mouse having dextran sodium sulphate (DSS)-induced colitis (I).
CC AAB51241 represents a protein (II) encoded by (I). (I) can have
CC immunosuppressive; immunostimulant; antiarthritic; antirheumatic.
CC antianaemic; cardiac; antiasthmatic; antidepressant; cerebroprotective;
CC antiallergic; antiinflammatory; antiviral; antibacterial; antifungal and
CC vulnary activities, and are haematopoietic cell stimulators. (I) and
CC (II) can be used to prevent, treat or ameliorate a medical condition. (I)
CC and (II) can be used to increase differentiation and proliferation of
CC haematopoietic cells in the treatment of immunological deficiency
CC syndromes, blood disorders (e.g. anaemia, wound healing, stroke, heart
CC attack), autoimmune disorders (e.g. rheumatoid arthritis, asthma,
CC allergic reactions, modulate inflammation, especially inflammatory bowel
CC disease and Crohn's disease), graft versus host disease and infectious
CC diseases (e.g. viral, bacterial or fungal infection). AAF44533 to
CC AAF44598 represent PCR primers used in the exemplification of the present
CC invention

PS
XX
XX The invention describes a new isolated nucleic acid encoding a Klebsiella
CC pneumoniae polypeptide. Also described are: a recombinant expression
CC vector comprising the nucleic acid, operably linked to a transcription
CC regulatory element; and a cell comprising the recombinant expression
CC vector. The nucleic acid is useful for preparing a vaccine composition
CC against Klebsiella pneumoniae. This sequence encodes a Klebsiella
CC pneumoniae polypeptide of the invention

CC antibodies. They may be useful for treatment of autoimmune disorders
CC (multiple sclerosis, insulin dependent diabetes), allergic conditions
CC (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers,
CC osteoporosis, osteoarthritis, central nervous system disorders
CC (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation
CC disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's
CC disease), tumours, bacterial, fungal or viral infections, depression and
CC psoriasis. AA445926 to AA445931 represent linker variants which are given
CC in the exemplification of the present invention

PS	Claim 1; SEQ ID NO 604; 2686pp; English.
XX	
CC	This invention relates to novel, isolated full length human cDNA
CC	molecules and the encoded proteins thereof. Specifically, it refers to
CC	cDNA clones obtained by an oligo-capping method, where none of these
CC	clones are identical to any known human mRNAs. The present invention
CC	describes an immunoassay to identify agonists and antagonists, as well as
CC	antibodies, antisense molecules and siRNAs that can all be used to bind
CC	to and modulate expression of the cDNA molecules. As such, these
CC	molecules are useful for diagnostic markers or therapeutic targets for
CC	the various diseases or morbid states. In particular, they are useful in
CC	gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC	disease, Parkinson's disease, dementia, short memory and various cancers,
CC	as well as for maintaining equilibrium of sense or motor function, and
CC	for treating emotional reaction, fear response and panic. Accordingly,
CC	they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC	cytostatic and tranquilliser activities. This polynucleotide is a full
CC	length human cDNA sequence of the invention. NOTE: This sequence is not
CC	given in the sequence listing of the specification but can be obtained on
CC	CD-ROM from the European Patent Office, Vienna Sub-office.

PT	New isolated polynucleotide and encoded polypeptides, useful in
PT	diagnostics, forensics, gene mapping, identification of mutations
PT	responsible for genetic disorders or other traits and to assess
PT	biodiversity.
XX	
PS	Claim 1; SEQ ID NO 825; 103pp; English.
XX	
CC	The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC	sequences. (I) is useful as hybridisation probes, polymerase chain
CC	reaction (PCR) primers, oligomers, and for chromosome and gene mapping.
CC	and in recombinant production of (II). The polynucleotides are also used
CC	in diagnostics as expressed sequence tags for identifying expressed
CC	genes. (I) is useful in gene therapy techniques involving (II). (II) is
CC	activity of (II) or to treat disease states involving (II). (II) is
CC	useful for generating antibodies against it, detecting or quantitating a
CC	polypeptide in tissue, as molecular weight markers and as a food
CC	supplement. (II) and its binding partners are useful in medical imaging
CC	of sites expressing (II). (I) and (II) are useful for treating disorders
CC	involving aberrant protein expression or biological activity. The
CC	polypeptide and polynucleotide sequences have applications in
CC	diagnostics, forensics, gene mapping, identification of mutations
CC	responsible for genetic disorders or other traits to assess biodiversity
CC	and to produce other types of data and products dependent on DNA and
CC	amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC	coding sequences of the invention. Note: The sequence data for this
CC	patent did not appear in the printed specification, but was obtained in
CC	electronic format directly from WIPO at
CC	ftp.wipo.int/pub/published_pct_sequences

XX Nucleic acids encoding human immune/haematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 41861; 3071pp + Sequence Listing; English.
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to prevent the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT digestive system, particularly cancer and cancer metastases.
XX
PS Disclosure; SEQ ID NO 3915; 986pp; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention

 (HUMA-) HUMAN GENOME SCI INC.

PI Rosen CA, Barash SC, Ruben SM;
 XX WPI; 2001-457727/49.
 XX Isolated polypeptide for treating, preventing and/or prognosing
 PT disorders related to the colon and rectum including colorectal cancers
 PT and also for testing and detection e.g. diagnosis.
 XX Disclosure; SEQ ID NO 247; 522pp + Sequence Listing; English.
 XX The present invention provides the protein and coding sequences of a
 CC number of colorectal cancer antigens. These are shown in AA157547-
 CC AA157619 and AA38569-AA38641. These can be used in the diagnosis,
 CC prevention and treatment of cancer of the colon and/or rectum. The
 CC present sequence is a colorectal cancer antigen genomic sequence. Note:
 CC The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

 XX New colorectal cancer polypeptide for diagnosing, prognosing, preventing,
 PT and treating immune, hyperproliferative, liver, kidney, reproductive
 PT disorders and for identifying modulators of therapeutic use.
 XX Disclosure; SEQ ID NO 247; 183pp; English.
 XX The present invention relates to the isolation of novel human colorectal
 CC cancer related proteins, and polynucleotide sequences encoding them. The
 CC sequences of the invention are useful in the diagnosis, treatment,
 CC prevention and/or prognosis of the colon and/or rectum, including
 CC colorectal cancer, colorectal cancer metastases, and gastrointestinal

CC disorders such as dysphagia, peptic oesophagitis, gastric reflux,
CC irritable bowel syndrome, and peritoneal diseases. The invention also
CC describes antibodies that bind colorectal cancer related proteins,
CC vectors, host cells, and recombinant and synthetic methods for producing
CC human colorectal cancer related polynucleotides, polypeptides, and/or
CC antibodies. ABS99797-ABS99974 represent genomic sequences encoding human
CC colorectal cancer related proteins. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from the USPTO web site at
CC seqdata.uspto.gov/psipdDIDentry.html

XX Disclosure; SEQ ID NO 849; 182pp; English.
PS
XX The invention relates to cancer-associated proteins (CAP) and the cancer-
CC associated (CA) nucleic acids encoding them. The invention also relates
CC to a method for treating cancers involving administering to a patient an
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC potential drug involving providing a cell that expresses a CA gene,
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC cancer associated with expression of a CAP protein in a test cell sample
CC and for screening for a bioactive agent capable of modulating the
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC cancer, involving determining the expression of a CA nucleic acid in a
CC tissue. This sequence represents a murine CA gene of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

DR
XX New polynucleotides and polypeptides for predicting the activity of
PT compounds that interact with protein tyrosine kinases and/or protein
PT tyrosine kinase pathways.
PT
XX Claim 2; SEQ ID NO 146; 139pp; English.
PS
XX The present invention describes a predictor set comprising a plurality of
XX polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated genomic DNA of
CC the invention.

XX Detecting granulocyte activation by detecting differential expression of
XX genes associated with granulocyte activation, which serves as diagnostic
XX markers that is useful for monitoring disease states and drug toxicity.

XX Claim 1; SEQ ID NO 135; 114pp; English.

XX The invention relates to detecting (M1) granulocyte (GC) activation

CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 165; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

PT Monitoring drug activities in vivo comprises comparing an expression
PT profile of a gene in a peripheral blood sample of a patient before and

PT after drug therapy.
XX
PS Disclosure; SEQ ID NO 52; 136pp; English.
XX
CC The invention relates to a method of monitoring drug activities in vivo
CC by comparing an expression profile of at least one gene in a peripheral
CC blood sample of a patient to a reference expression profile of the at
CC least one gene, where the at least one gene is differentially expressed
CC in peripheral blood mononuclear cells (PBMCs) of patients who have a non-
CC blood disease and are subjected to a drug therapy as compared to PBMCs
CC isolated from the patient before the drug therapy, and where the patient
CC has the non-blood disease and is being treated by the drug therapy. The
CC method, kit, and nucleic acid array are useful for monitoring drug
CC activities in vivo. The drug is especially CCI-779, an ester analogue of
CC the immunosuppressant rapamycin which is a potent inhibitor of the
CC mammalian target of rapamycin (mTOR). This sequence represents a gene
CC expressed in PBMC altered by the drug therapy. (Note: this sequence does
CC no form part of the printed specification but was obtained in electronic
CC format from WIPO at ftp.wipo.int/pub/published_pct_sequences/).

XX The invention relates to an isolated nucleic acid molecule (I) comprising
CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
CC specification or its complement. (I) is useful for: (a) assessing whether
CC a patient is afflicted with prostate cancer; (b) monitoring the
CC progression of prostate cancer in a patient; (c) assessing the efficacy
CC of a test compound to inhibit prostate cancer in a patient; (d) assessing
CC the efficacy of a therapy for inhibiting prostate cancer in a patient;
CC (e) selecting a composition for inhibiting prostate cancer in a patient;
CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)
CC determining whether prostate cancer has metastasized in a patient; (h)
CC assessing the aggressiveness or indolence of prostate cancer in a patient
CC ; (I) is also useful as a pharmacodynamic or pharmacogenomic marker

XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
XX Example 2; SEQ ID NO 3299; 210pp; English.
PS
XX
XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual,
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
```

CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytotatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX PT In vitro detection of systemic inflammatory response syndrome and related
XX PT conditions, for e.g. monitoring progression, comprises detecting abnormal
XX PT expression of disease-related genes.
XX PS Disclosure; Page; 75pp; German.
XX CC The invention relates to a novel method for in vitro detection of
XX CC systemic inflammatory response syndrome (SIRS). The method comprises
XX CC detecting abnormal expression of disease-related genes, or their
XX CC associated peptides. The method of the invention demonstrates
XX CC antibacterial, immunosuppressive and antiinflammatory applications and
XX CC may be used for early differential diagnosis, monitoring progression, and
XX CC assessing risk, assessing the likely response to treatment and for post
XX CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and
XX CC sepsis-like conditions. The recombinant or synthetic nucleic acid
XX CC sequences of the invention, or derived proteins or peptides, may be
XX CC useful as calibrants in assays for the specified diseases, for evaluating
XX CC activity or toxicity in screening for active agents and/or for
XX CC preparation of agents for treatment or prevention of the specified
XX CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic
XX CC marker DNA fragment of the invention. Note: The sequence data for this
XX CC patent did not form part of the printed specification, but was obtained

CC in electronic format directly from WIPO at ftp.wipo.int/pub/published
CC pct sequences. Furthermore, a number of arbitrary SEQ ID NO.s are
CC disclosed within the specification, however, these have not been taken
CC into account during indexing due to inconsistencies in application and
CC format

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A and the oligo-dT track served to verify it as a clone from the normalized hippocampus library cDNA library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distributing of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence: 1-73, >AT rich#Low complexity
 Seq primer: M13 Forward
 POLYA=yes.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT

----- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: <http://genome.wustl.edu>
Contact: submissions@wustl.edu
----- Summary Statistics
Center project name: M_BA0404L15

NOTICE:

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa
and Minako Tatenno in the laboratory of Pieter de Jong
(<http://www.chori.org>) from female C57BL/6J mouse kidney and/or
brain genomic DNA. The clone and detailed information can be
obtained from Research Genetics, Inc. (<http://www.resgen.com>) or
Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Primer A: atactgtgaggaattgact
Primer B: attacttgggaagttaaaaa
STS size: 458

PCR Profile:
Hot Start: 95 degrees C for 2.00 min
Denaturation: 95 degrees C for 0.50 min
Annealing: 51 degrees C for 0.50 min
Polymerization: 72 degrees C for 1.00 min
PCR Cycles: 35
Extension: 72 degrees C for 7.0 min
Thermal Cycler: MJ Instruments PTC100

Protocol:
Template: 200 ng
Primer: each 1uM
dNTP's: each 200 uM
Taq Polymerase: 0.05 units/ul (Fast Start High Fidelity, Roche)
Total Vol: 50 ul

Buffer:
MgCl2: 1.8 mM
Fast Start polymerase reaction buffer (Roche)

Bases 5-388 are 96% homologous (Blast) to bases 2198-2587 of NM 002094.1. Primers were chosen to amplify genomic DNA in the 3' region of GSPT1. As human sequence was used to design the primers, the primer sequences are not included in the rhesus sequence provided below. To obtain additional information regarding primers or clones contact: Dr. Robert Norgren; Dept of Genetics, Cell Biology & Anatomy; University of Nebraska Medical Center; 986395 Nebraska Medical Center; Omaha, NE 68198. Email: rnorgren@unmc.edu

A database containing sequences associated with this project can be found at: <http://rhesusgeneschip.unomaha.edu/index.html>.

Tel: 6172580933
Fax: 6172580903
Email: mczody@broad.mit.edu
Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 711
Protocol:
23,021,928 chimpanzee whole genome shotgun reads were aligned to
the Human genome NCBI
Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,
including Clint (Pan
troglodytes versus), 3 other Pan troglodytes versus chimps
(Donald, Karlien, Yvonne), 3 pan
troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps
of unknown origin
(Gon, Unknown Chimp). Common names: Pan troglodytes versus is the
western chimp and Pan
troglodytes troglodytes is the central chimp. To be included in
chimpanzee SNP discovery, a
read must be at least 500bp in length, at least 50% of its base
calls must have Phred
score >= 20, at least 30% of its base calls must satisfy
SNQS(30,25) (single strand NQS, the
base in question has Phred score >= 30, the surrounding 10 bases in
the read have Phred
score >= 25), and the read must have at least 200 bp SNQS(30,25)
bases. Reads not uniquely
placed in the genome and read pairs whose two ends were not
consistently placed were
discarded. After above filtering, NQS(30,25) standard was applied
to all pairs of
overlapping reads to call NQS bases and SNPs. Alignments (between
two reads) with less
than 100 NQS bases or with SNP rate > 0.01 were discarded. To
exclude alignment between two

copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

Contact: hattori@gs.riken.go.jp
----- Project Information -----
Center project name: HumDraft11
Center clone name: XXPac-662A14
----- Summary Statistics -----
Sequencing vector: PCR products; 100% of reads
Chemistry: Dye-terminator ET-amersham; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 103806 bases at least Q40
Consensus quality: 109449 bases at least Q30
Consensus quality: 111869 bases at least Q20
Insert size: 113473; sum-of-contigs
Quality coverage: 4.03x in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved

COMMENT
Medical Center Dr., Rockville, MD 20850, USA
On Aug 21, 1997 this sequence version replaced gi:1930144.
BAC clone CIT987SK-551G9 is located in band 16p13.1 of chromosome
16. Genes were identified by a combination of five methods: XGRAIL
(available by anonymous ftp from arthur.epm.ornl.gov), Genefinder
(available by anonymous ftp from colin@u.washington.edu), GENSCAN
(searches of the EST database at TIGR
http://www.tigr.org/tdb/hcd/hcd.html) and searches against a
peptide database. Repeats were identified using Censor (Jurka, J.,
Klonowski, P., Dagman, V., Pelton, P. Censor-a program for the
identification and elimination of repetitive elements from DNA
sequences. Computers Chem 20: 119-121 (1996); available by
anonymous ftp from ncbi.nlm.nih.gov).

 ----- Project Information
 Center project name: L32316
 Center clone name: 273_M_3

* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1 21232: contig of 21232 bp in length
 * 21233: gap of unknown length
 * 21333: contig of 69983 bp in length
 * 91316: gap of unknown length
 * 91415: gap of unknown length
 * 145954: contig of 54539 bp in length
 * 146054: gap of unknown length
 * 146055: 161009: contig of 14955 bp in length.

COMMENT Center project name: H NH0340P24.
* NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

1 2004: contig of 2004 bp in length
2005 2022: gap of unknown length
2023 5849: contig of 3827 bp in length
5850 5867: gap of unknown length
5868 9538: contig of 3671 bp in length
9539 9556: gap of unknown length
16258 16276: gap of unknown length
16277 22543: contig of 6267 bp in length
22544 22561: gap of unknown length
22562 29557: contig of 6996 bp in length

XX New isolated nucleic acid molecule, useful for drug screening and
PT toxicity assays or for assessing the impact, including toxicity, of a
PT compound, pharmaceutical agent or environmental pollutant on a cell or
PT living organism.
XX
PS Claim 1; SEQ ID NO 6783; 4lpp; English.
XX
CC This invention is related to a novel isolated canine nucleic acid
CC sequences and the construction of canine microarrays containing a
CC significant portion of the canine genome. The isolated canine nucleic
CC acid sequences of the invention may be useful for drug screening and
CC toxicity assays. The invention is therefore useful for assessing the
CC impact, including toxicity, of a compound, pharmaceutical agent or
CC environmental pollutant on a cell or living organism. The methods are
CC useful for detecting genes that are up- or down-regulated in canines in a
CC disease state. The sequences are useful as diagnostic agents or markers
CC to detect a cellular response in a sample individually or as part of a
CC gene expression profile. It is also useful as a target for agents that
CC modulate gene expression or activity. The database is useful for
CC producing electronic Northern blots that allow the user to determine the cell
CC type or tissue in which a given gene is expressed and to allow
CC determination of the abundance or expression level of a given gene in a
CC particular tissue or cell. The methods are useful for determining the
CC similarity of a toxic response to one or more individual compounds. The
CC methods are useful for predicting at least one toxic response or the
CC likelihood that a compound or test agent will induce various specific
CC pathologies such as those of the liver (liver necrosis, fatty liver
CC disease, protein adduct formation or hepatitis), those of the kidney,
CC heart, brain or testes, or other pathologies associated with at least one
CC of the toxins. The methods are also useful for predicting or elucidating
CC the potential cellular pathways influenced, induced or modulated by the
CC compound or test agent due to the similarity of the expression profile
CC compared to the profile induced by a known toxin. The present sequence is
CC that of a canine DNA sequence which was claimed for use during the
CC production of a canine microarray of the invention.

XX
XX Diagnosing breast cancer comprises comparing the level of expression of
PT genes or gene products in a first biological sample taken from a patient
PT with that in a normal patient sample.
XX
XX Claim 2; SEQ ID NO 104; 53pp; English.
XX
CC The present invention relates to a method (M1) for diagnosing breast
CC cancer in a patient. The method comprises comparing the level of
CC expression of one or more genes or gene products in a biological sample
CC from the patient with that in a normal patient sample, where a difference
CC in the gene expression in the first sample compared to that in the second
CC sample is a diagnostic of the disease. Also claimed are: method (M2) for
CC distinguishing between normal and disease tissues; method (M3) for
CC monitoring the response of a breast cancer patient to treatment with an
CC anti-cancer agent; method (M4) for identifying a compound for treating
CC breast cancer; and an array for distinguishing between normal and disease
CC tissues comprising two or more probes corresponding to genes selected
CC from ADR98995-ADR99121 or comprising two or more polypeptides selected
CC from ADR99122-ADR99248. In M1 and M2 the genes are selected from ADR98995
CC -ADR99121 and the gene products are polypeptides selected from ADR99122-
CC ADR99248. M1 is useful for diagnosing breast cancer. M2 and the array are
CC useful for distinguishing between normal and disease tissue. M3 is useful
CC for monitoring the response of a breast cancer patient to treatment with
CC an anti-cancer agent. M4 is useful for identifying a compound for
CC treating breast cancer. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

XX
XX Novel isolated polypeptide encoded by breast cancer marker gene, useful
PT for diagnosing, staging, monitoring, prognosing and treating diseases
PT associated with breast cancer.
XX
XX Disclosure; Page 189; 725pp; English.
XX
XX The invention relates to an isolated polypeptide encoded by a breast
CC cancer marker gene comprising any of 141/21-805 nucleotide sequences,
CC given in the specification. The methods of the invention are useful for
CC diagnosing patients having an identified breast mass or symptoms
CC associated with breast cancer, to diagnose breast cancer or its
CC precursors, and for monitoring the efficacy of treatment of a breast
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also
CC useful for evaluating a patient before, after or during therapy, to
CC evaluate the reduction in a tumour burden. The breast cancer marker gene
CC proteins are useful as immunogens for raising antibodies, by immunising a
CC mammal with a breast cancer marker protein. The marker proteins are
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to
CC identify other proteins which bind to or interact with the marker
CC proteins. The breast cancer marker genes are useful as surrogate marker
CC genes for one or more disorders, disease states or conditions leading to
CC disease states, in particular, breast cancers. The breast cancer marker
CC genes are useful as pharmacodynamic marker genes. An antibody which
CC selectively binds to a protein of a breast cancer marker gene is useful
CC for treating cancers, particularly breast cancers. The host cell of the
CC invention is useful for producing non-human transgenic animals. This
CC polynucleotide sequence represents one of the breast cancer marker genes
CC of the invention

XX
XX A method, useful for prognosing and treating solid tumor, comprises
PT comparing an expression profile of a gene expressed in peripheral blood
PT mononuclear cells to a reference expression profile of a gene.
XX
XX Disclosure; Page; 111pp; English.
XX
XX The invention describes a method comprising comparing an expression
CC profile of at least one gene in a peripheral blood sample of a patient to
CC at least one reference expression profile of the at least one gene, where
CC the patient has a solid tumour, and each of the gene is differentially
CC expressed in peripheral blood mononuclear cells (PBMCs) of a first class
CC of patients as compared to PBMCs of a second class of patients, where
CC both the first and second classes is a subcluster formed by an
CC each of the first and second classes is a subcluster formed by an
CC unsupervised clustering analysis of gene expression profiles in PBMCs of
CC a population of patients who have the solid tumour, and where the
CC majority of the first class of patients has a first clinical outcome, and
CC the majority of the second class of patients has a second clinical
CC outcome. Also described are: a system comprising (i) a memory or a
CC storage medium including data that represent an expression profile of at
CC least one gene in a peripheral blood sample of a patient who has a solid
CC tumour, (ii) at least another storage medium including data that
CC represent at least one reference expression profile of the gene, (iii) a
CC program capable of comparing the expression profile to the reference
CC expression profile, and (iv) a processor capable of executing the
CC program, where expression levels of the gene in peripheral blood
CC mononuclear cells of patients who have the solid tumour correlate with
CC clinical outcomes of the patients; and a nucleic acid or protein array
CC comprising concentrated probes for solid tumour prognosis genes, where
CC each of the solid tumour prognosis genes is differentially expressed in
CC PBMCs of a first class of patients as compared to PBMCs of a second class
CC of patients, where both the first and second classes of patients have a
CC solid tumour, and where the first class of patients has a first clinical
CC outcome, and the second class of patients has a second clinical outcome.
CC The method, system, and array are useful for prognosing and treating
CC solid tumours. This sequence represents a solid tumour prognosis gene of
CC the invention. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_ftc_sequences.

PS	Claim 1; SEQ ID NO 12702; 658pp; English.	
XX		
CC	The invention relates to a single exon nucleic acid probe (SENP) (I) for	
CC	measuring human gene expression in a sample derived from human adult	
CC	liver, comprising one of 13109 defined nucleotide sequences given in the	
CC	specification (or complements/ fragments). The probe hybridizes at high	
CC	stringency to a nucleic acid molecule expressed in the human adult liver.	
CC	(I) may be used for predicting, measuring and displaying gene expression	
CC	in samples derived from human adult liver. The genes identified may be	
CC	involved in genetic liver diseases such as cirrhosis,	
CC	hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is	
CC	associated with coronary heart disease. ABS25011-ABS51005 represent human	
CC	liver single exon nucleic acid probes of the invention. Note: The	
CC	sequence information for this patent does not appear in the printed	
CC	specification but was obtained in electronic format directly from WIPO at	
CC	ftp.wipo.int/pub/published_pct_sequences

PT Diagnosing non-blood disease such as solid tumor, involves comparing
PT differential expression profile of specific genes in peripheral blood
PT sample of subject with reference expression profile of specific genes.
XX
PS Disclosure; SEQ ID NO 125; 350pp; English.
XX
CC The invention relate to a method of diagnosing (M1) non-blood disease

CC such as solid tumor by providing peripheral blood sample of human having
 CC non-blood disease, and comparing an expression profile of specific genes
 CC in the peripheral blood sample to reference expression profile of the
 CC genes, where each of the genes is differentially expressed in peripheral
 CC blood mononuclear cells (PBMCs) of patients having the disease as
 CC compared to PBMCs of normal humans. The method is useful for diagnosing
 CC non-blood disease such as solid tumor. The solid tumor is chosen from
 CC renal cell carcinoma (RCC), prostate cancer and head/neck cancer. The
 CC peripheral blood sample comprises enriched PBMCs. The peripheral blood
 CC sample is a whole blood sample (claimed). (M1) is useful for identifying
 CC genes that are differentially expressed in peripheral blood samples
 CC isolated at different stages of progression, development or treatment of
 CC RCC and/or other solid tumors. This sequence corresponds to a gene that
 CC is differentially expressed and detected by the method of the invention.
 CC (Note: this sequence is not given as part of the printed specification
 CC but was obtained from WIPO in electronic format at
 CC ftp.wipo./pub/published_pct_sequences).

XX New PRO polynucleotides and polypeptides, useful in diagnosing
 PT and treating an immune related disease, e.g. systemic lupus
 PT erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in
 PT stimulating an immune response.

XX Claim 2; SEQ ID NO 279; 3009pp; English.

XX The present invention describes an isolated PRO nucleic acid (I). Also

CC described: (1) a vector comprising (1); (2) a host cell comprising the
 CC vector of (1); (3) a process for producing a PRO polypeptides; (4) an
 CC isolated PRO polypeptide; (5) a chimeric molecule comprising the
 CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an
 CC antibody which specifically binds to a polypeptide of (4); (7) a
 CC composition of matter comprising a polypeptide of (4), an agonist or
 CC antagonist of the polypeptide or an antibody that binds to the
 CC polypeptide in combination with a carrier; (8) an article of manufacture
 CC comprising a container, a label on the container and a composition of
 CC matter of (7); (9) a method of treating an immune related disease in a
 CC mammal; (10) a method for determining the presence of a PRO polypeptide
 CC in a sample suspected of having the polypeptide; (11) a method of
 CC diagnosing an immune related disease or an inflammatory immune response
 CC in mammal; (12) a method of identifying a compound that inhibits or
 CC mimics the activity of or expression of a gene encoding a PRO polypeptide
 CC ; and (13) a method of stimulating the immune response in a mammal. The
 CC PRO sequences have anti-allergic, antianaemic, antiarthritic,
 CC antiasthmatic, antidiabetic, antiinflammatory, antipsoriatic,
 CC antirheumatic, antithyroid, CNS, dermatological, immunosuppressive, muscular,
 CC haemostatic, hepatotropic, immunostimulant, immunosuppressive, osteopathic,
 CC nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and
 CC virucide activities, and can be used in gene therapy. The nucleic acid
 CC (I) and the encoded polypeptides, compositions, kits and methods are
 CC useful in diagnosing and treating an immune related disease and in
 CC stimulating an immune response. The present sequence represents a human
 CC PRO nucleotide sequence from the present invention.

XX New PRO polypeptides and polynucleotides, useful for treating e.g.
 PT erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated

PT renal disease, or demyelinating diseases of the central or peripheral
PT nervous system.
XX
PS Claim 1; SEQ ID NO 1942; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC disease, infectious or autoimmune chronic active hepatitis, primary
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC disease, asthma, allergic rhinitis, atopic dermatitis, food
CC hypersensitivity, urticaria, an immunologic disease of the lung,
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC pneumonitis, a transplantation associated disease, graft rejection or
CC graft-versus-host disease. The present sequence encodes a PRO protein of
CC the invention.

PT New nucleic acid, and derived proteins, useful for diagnosis of bronchial
PT cancer and in screening for therapeutic and diagnostic agents.
XX
PS Claim 1; SEQ ID NO 376; 1381pp; German.
XX
CC This invention relates to a novel isolated nucleic acid associated with
CC bronchial cancer comprising 489 defined sequences given in the
CC specification. The invention may be useful for the production of
CC compounds with a cytostatic activity through the inhibition of expression
CC or activity of tumour-associated proteins. The novel DNA sequences and
CC the proteins/peptides encoded by them are used for detecting bronchial
CC cancer or determining the risk of developing it and to screen for
CC specific binding partners of the DNA or protein sequences, where the
CC binding partners are potentially useful as agents for treating or
CC diagnosing bronchial cancer. The DNA or protein sequences can also be
CC used for prognosis, detection of metastases and for secondary treatment
CC (of tumours that have been stabilised or are no longer detectable).
CC Detecting abnormal expression of the DNA sequences provides early
CC diagnosis of bronchial cancers. The present sequence is that of a novel
CC bronchial cancer-associated human gene sequence of the invention.

PS Claim 1; SEQ ID NO 57; 42pp; English.
XX
CC The invention relates to a combination comprising a number of cDNAs
CC expressed in prostate cancer. The invention also relates to a method for
CC detecting differential expression of one or more cDNAs in a sample
CC containing nucleic acids by hybridising a substrate with the nucleic
CC acids, thus forming one or more hybridisation complexes, detecting
CC hybridisation complex formation and comparing the complexes formed with
CC standard complexes, where differences between the standard and the sample
CC complex formation indicate differential expression of cDNAs in the
CC sample. The differential expression is diagnostic of prostate cancer. The
CC invention also relates to proteins and antibodies related to the cDNAs.
CC The combination is useful for diagnosing, treating or monitoring the
CC progression of treatment of prostate cancer. The antibodies are useful
CC for detecting prostate cancer. This sequence represents a human prostate
CC cancer cDNA of the invention.

XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian

XX cancer cells as compared to their normal non-cancerous ovarian cells are

XX used to characterize stage, grade, histological type of ovarian cancer.

XX Disclosure; SEQ ID NO 20129; 106pp; English.

XX The invention relates to nucleic acid markers which are overexpressed in

XX ovarian cancer cells as compared to their expression in normal (i.e. non-

XX cancerous) ovarian cells. The invention also relates to polypeptides

XX encoded by the markers, antibodies that selectively bind to the

XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk

XX of developing ovarian cancer involving inhibiting expression of a gene

XX corresponding to a marker of the invention and a method of treating a

XX patient afflicted with ovarian cancer comprising providing to cells of

XX the patient an antisense oligonucleotide complementary to a marker of the

XX invention. The markers are useful for assessing if a patient is afflicted

XX with ovarian cancer, which involves comparing the level of expression of

XX a marker in a patient sample and a normal level of expression of the

XX expression levels indicates ovarian cancer. The level of expression of a

XX marker corresponds to a secreted protein or to a transcribed

XX polynucleotide or its portion. The level of expression of the marker is

XX assessed by detecting the presence in the sample, a protein or protein

XX fragment corresponding to the marker. The presence of protein or protein

XX fragment is detected using an antibody that specifically binds with the

XX protein or protein fragment. Alternatively, the level of expression of

XX the marker is assessed by detecting the presence of a transcribed

XX polynucleotide which anneals with the marker or anneals with a portion of

XX the polynucleotide comprising the marker, under stringent conditions. The

XX marker is also used for monitoring the progression of ovarian cancer in a

XX patient which involves detecting expression of the marker in a patient

XX sample at a first point in time, repeating the method at a subsequent

XX time and comparing the level of expression. The method is carried out

XX using an ovarian tissue sample. A composition comprising a marker, cancer,

XX a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the

XX specification or its complement. (I) is useful for: (a) assessing whether

XX a patient is afflicted with prostate cancer; (b) monitoring the

XX progression of prostate cancer in a patient; (c) assessing the efficacy

XX of a test compound to inhibit prostate cancer in a patient; (d) assessing

XX the efficacy of a therapy for inhibiting prostate cancer in a patient;

XX (e) selecting a composition for inhibiting prostate cancer in a patient;

XX (f) assessing the prostate cell carcinogenic potential of a compound; (g)

XX determining whether prostate cancer has metastasized in a patient; (h)

XX assessing the aggressiveness or indolence of prostate cancer in a patient

XX ; (i) is also useful as a pharmacodynamic or pharmacogenomic marker

XX Lee J, Lillie J;

XX WPI; 2001-611502/70.

XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian

XX cancer cells as compared to their normal non-cancerous ovarian cells are

XX used to characterize stage, grade, histological type of ovarian cancer.

XX Disclosure; SEQ ID NO 20129; 106pp; English.

XX The invention relates to nucleic acid markers which are overexpressed in

XX ovarian cancer cells as compared to their expression in normal (i.e. non-

XX cancerous) ovarian cells. The invention also relates to polypeptides

XX encoded by the markers, antibodies that selectively bind to the

XX polypeptides, a method of inhibiting ovarian cancer in a patient at risk

XX of developing ovarian cancer involving inhibiting expression of a gene

XX corresponding to a marker of the invention and a method of treating a

XX patient afflicted with ovarian cancer comprising providing to cells of

XX the patient an antisense oligonucleotide complementary to a marker of the

XX invention. The markers are useful for assessing if a patient is afflicted

XX with ovarian cancer, which involves comparing the level of expression of

XX a marker in a patient sample and a normal level of expression of the

XX expression levels indicates ovarian cancer. The level of expression of a

XX marker corresponds to a secreted protein or to a transcribed

XX polynucleotide or its portion. The level of expression of the marker is

XX assessed by detecting the presence in the sample, a protein or protein

XX fragment corresponding to the marker. The presence of protein or protein

XX fragment is detected using an antibody that specifically binds with the

XX protein or protein fragment. Alternatively, the level of expression of

XX the marker is assessed by detecting the presence of a transcribed

XX polynucleotide which anneals with the marker or anneals with a portion of

XX the polynucleotide comprising the marker, under stringent conditions. The

XX marker is also used for monitoring the progression of ovarian cancer in a

XX patient which involves detecting expression of the marker in a patient

XX sample at a first point in time, repeating the method at a subsequent

XX time and comparing the level of expression. The method is carried out

XX using an ovarian tissue sample. A composition comprising a marker, cancer,

XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 39541; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAK62170 to AAK61921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patient's own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of haematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAK82169
XX represent sequences used in the exemplification of the present invention

XX
XX Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
XX Claim 2; SEQ ID NO 883; 201pp; English.
XX
XX The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD32231-ADD33223 represent human mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
XX 1906, 2408 and 2643.

XX
XX Determining susceptibility of an individual to joint space narrowing,
XX osteophyte development and/or joint pain comprises identifying whether
XX the individual has at least one polymorphism in a polynucleotide encoding
XX a protein.
XX
XX Disclosure; SEQ ID NO 303; 297pp; English.
XX
XX The invention relates to a method of determining susceptibility of an
XX individual to joint space narrowing and/or osteophyte development and/or
XX joint pain comprising identifying whether the individual has at least one
XX polymorphism in a polynucleotide encoding at least one of the protein
XX listed in the specification. The methods, composition and agent are
XX useful for modulating the susceptibility of an individual to joint space
XX narrowing and/or osteophyte development and/or joint pain that is
XX associated with a disease, preferably osteoarthritis. The cell line and
XX the non-human animal are useful for screening for an agent for diagnosing
XX an individual having susceptibility to joint space narrowing and/or
XX osteophyte development and/or joint pain. This sequence corresponds to
XX the polynucleotide encoding a protein listed in the specification. (Note:
XX The sequence data for this patent did not form part of the printed
XX specification but was obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences).

XX Altering plant characteristics, useful for producing plants for enzyme or
XX pharmaceutical production comprising modifying in a plant, expression of
XX one or more nucleic acids and/or modifying level or activity of one or
XX more proteins.
XX Claim 1; SEQ ID NO 2565; 134pp; English.

CC This invention relates to a novel method for altering one or more plant
CC characteristics. Specifically, it refers to identifying genes that are up
CC - or down-regulated in transgenic plants overexpressing the heterodimeric
CC E2Fa/DPA transcription factor of Arabidopsis and using these sequences to
CC alter plant characteristics accordingly. The present invention describes
CC generating transgenic plants for the production of growth regulators,
CC enzymes, therapeutics, pharmaceuticals and animal feed products, where
CC the altered plant characteristics are selected from increased yield or
CC biomass, enhanced survival capacity, stress tolerance, plant architecture
CC or physiology, altered endoreduplication, biochemistry, signal
CC transduction, storage lipid mobilization and/or altered photosynthesis,
CC each relative to the corresponding wild type plants. Accordingly, these
CC sequences can also be useful as positive or negative selectable markers
CC during transformation of cells or tissues. The identified genes play a
CC role in a variety of biological processes such as DNA replication, cell
CC wall biosynthesis, nitrogen and/or carbon metabolism or they function as
CC transcription factors. This polynucleotide sequence is thale cress cDNA
CC repressed 1.3 fold or more in plants overexpressing the E2Fa/DPA
CC transcription factor, given in an exemplification of the invention.

XX PS Disclosure; SEQ ID NO 14349; 1037pp; English.

XX CC The present invention describes substantially purified human proteins
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
CC in the specification). ABN15762 to ABN27252 encode the human ORFX
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
CC treating or preventing a pathology associated with an ORFX-associated
CC disorder in humans, and in the manufacture of a medicament for treating a
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
CC sequences can be used in gene therapy. ORFX sequences can be used in the
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
CC osteoarthritis, neurodegenerative disorders, disorders related to organ
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
CC storage disease, various immune deficiencies and disorders, infectious
CC disease, autoimmune disorders such as multiple sclerosis, rheumatoid
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,
CC bone degenerative disorders, or periodontal disease, and for gut
CC protection or regeneration and treatment of lung or liver fibrosis,
CC repulsion or regeneration in various tissues and conditions resulting from
CC systemic cytokine damage. N.B. The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PT Novel human cancer associated protein encoded within open reading frame
XX PT of cancer associated gene, useful as targets for diagnosing cancer.
XX PS Claim 16; SEQ ID NO 656; 182pp; English.
XX CC The invention relates to cancer-associated proteins (CAP) and the cancer-
XX CC associated (CA) nucleic acids encoding them. The invention also relates
XX CC to a method for treating cancers involving administering to a patient an
XX CC inhibitor of CAP, and a method of screening for anticancer activity in a
XX CC potential drug involving providing a cell that expresses a CA gene
XX CC contacting a tissue sample derived from a cancer cell with an anticancer
XX CC drug candidate and monitoring the effect of the anticancer drug candidate
XX CC on expression of the CA gene. The CAP proteins are useful for detecting
XX CC cancer associated with expression of a CAP protein in a test cell sample
XX CC and for screening for a bioactive agent capable of modulating the
XX CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
XX CC cancer, involving determining the expression of a CA nucleic acid in a
XX CC tissue. This sequence represents a human CA gene of the invention. Note:
XX CC The sequence data for this patent did not form part of the printed
XX CC specification, but was obtained in electronic format directly from WIPO
XX CC at ftp.wipo.int/pub/published_pct_sequences

XX Determining susceptibility of an individual to joint space narrowing.
PT osteophyte development and/or joint pain comprises identifying whether
PT the individual has at least one polymorphism in a polynucleotide encoding
PT a protein.
XX Disclosure; SEQ ID NO 208; 297pp; English.
PS The invention relates to a method of determining susceptibility of an
CC individual to joint space narrowing and/or osteophyte development and/or
CC joint pain comprising identifying whether the individual has at least one
CC polymorphism in a polynucleotide encoding at least one of the protein
CC listed in the specification. The methods, composition and agent are
CC useful for modulating the susceptibility of an individual to joint space
CC narrowing and/or osteophyte development and/or joint pain that is
CC associated with a disease, preferably osteoarthritis. The cell line and
CC the non-human animal are useful for screening for an agent for diagnosing
CC an individual having susceptibility to joint space narrowing and/or
CC osteophyte development and/or joint pain. This sequence corresponds to
CC the polynucleotide encoding a protein listed in the specification. (Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences).

PS Claim 68; Page 102; 115pp; English.
XX
CC The present invention relates to a method of isolating, amplifying and
CC sequencing gene specific sequences. This involves (a) synthesising double
CC -stranded (ds) DNAs containing the gene specific polynucleotide which has
CC an anchor primer with a captureable group at the 3' end; (b) ligating a
CC ds adapter molecule to each dsDNA; (c) synthesising a single-stranded
CC (ss) gene specific polynucleotide using a gene specific oligonucleotide
CC primer having a second captureable group; and (d) amplifying the single
CC stranded gene specific polynucleotide after isolation. The method is used
CC for determining without cloning an extended sequence of a gene specific
CC polynucleotide that has a partial gene sequence known by carrying out the
CC method and then sequencing the amplified isolated gene specific
CC polynucleotide without cloning. The method has several diagnostic and
CC research applications, including genetic and infectious disease
CC diagnosis, forensic and paternity testing, toxicology testing, individual
CC identification, genetic research, occupational hazard screening and
CC pharmaceutical development. The method can be used to detect mutations in
CC target genes which may lead to disease conditions such as Alzheimer's
CC disease, cancer and Duchenne muscular dystrophy, thus facilitating the
CC diagnosis of genetic diseases as well as the identification of carriers
CC of recessive genetic disorders. The present sequence is an
CC oligonucleotide useful in the method of the invention

XX Determining if a compound induces a toxic effect on a tissue or cell, for
XX identifying hepatotoxic compounds, comprises comparing a gene expression
PT profile of a tissue or cell sample to a database of Tox mean and non-Tox
PT mean values.
XX Claim 44; SEQ ID NO 980; 874pp; English.
XX The present invention describes a method for determining whether a
XX compound induces a toxic effect on a tissue or cell. The method comprises
CC preparing a gene expression profile of a tissue or cell sample exposed to
CC the compound, and comparing the gene expression profile to a database
CC comprising data or information on the Tox mean and non-Tox mean value.
CC The method is useful for predicting or identifying at least one toxic
CC effect, particularly hepatotoxicity, of a test or unknown compound. The
CC genes listed in the specification are useful as diagnostic or toxicity
CC markers for the prediction or identification of the physiological state
CC of tissue or cell sample that has been exposed to a compound, or to
CC identify or predict the toxic effects of a compound or an agent. These
CC may also be used as markers for monitoring toxicity progression or for
CC drug screening. The present sequence represents a primary rat hepatocyte
CC toxicity modelling related gene sequence from the present invention.

XX New recombinant DNA construct comprising a promoter positioned to provide
XX for expression of a polynucleotide encoding a polypeptide from a
XX microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 32578; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
XX promoter functional in a plant cell, where the promoter is positioned to
XX provide for expression of a polynucleotide encoding a polypeptide from a
XX microbial source. The invention also relates to a transformed plant
XX comprising the recombinant DNA construct and a method of producing a
XX transformed plant having an improved property. The plant is a crop plant
XX such as maize or soybean. The method of producing a transformed plant
XX having an improved property comprises transforming a plant with the
XX recombinant DNA construct and growing the transformed plant, where the
XX polynucleotide or polypeptide is useful for improving plant properties.
XX The recombinant DNA construct is useful for producing plants with
XX improved plant properties, e.g. improved cold, heat or drought tolerance,
XX tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
XX increased resistance to plant disease, better growth rate by modification
XX of the cell cycle pathway with plant growth regulators, increased rate of
XX homologous recombination, modified seed oil or protein yield and/or
XX content, improved yield by modification of carbohydrate, nitrogen or
XX phosphorus use and/or uptake, by modification of photosynthesis or by
XX providing improved plant growth and development under at least one stress
XX condition, improved lignin production or improved galactomannan
XX production. This sequence represents a bacterial polynucleotide used in
XX the scope of the invention. Note: The sequence data for this patent did
XX not form part of the printed specification but was obtained in electronic
XX format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX New recombinant DNA construct, useful for improving plant tolerance to
XX cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
XX pests, for conferring increased resistance to plant disease, or for
XX improving yield.
XX
XX Claim 1; SEQ ID NO 4266; 15pp; English.
XX
XX The invention describes a recombinant DNA construct comprising a
XX polynucleotide consisting of a sequence encoding an amino acid sequence
XX available in electronic form from the US patent office at
XX ftp.seqdata.uspto.gov/sequence.html?docID:2004034888. The polynucleotide
XX of the invention are also useful in physical arrays of molecules and as
XX plant breeding markers. The recombinant DNA construct is useful for
XX improving plant tolerance to cold, heat, drought, herbicides, extreme
XX osmotic conditions, pathogens or pests, for manipulating growth rate in
XX plant cells by modification of the cell cycle pathway, for conferring
XX increased resistance to plant disease, for producing galactomannan,
XX lignin or plant growth regulators, for increasing the rate of homologous
XX recombination in plants, for improving yield by modification of
XX photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
XX or by providing improved plant growth and development under at least one
XX stress condition or for modifying seed oil or protein yield and/or
XX content. This sequence represents a plant full length insert
XX polynucleotide that can be used in the recombinant DNA construct of the
XX invention.

XX
XX New bombesin like peptide with high binding affinity for bombesin
PT receptors for the modulation of receptors, for example, in the
PT gastrointestinal tract.
XX
PS Claim 15; Fig 1; 16pp; English.
XX
XX The invention relates to genes which encode receptors capable of binding
CC to bombesin-like peptides, expressed in vertebrate tissue. Bombesin-like
CC peptides are produced and secreted by human small cell lung cancer cells.
CC Examples of these peptides are gastrin releasing peptide (GRP),
CC neuromedin B (NMB), neuromedin C (NMC), bombesin receptor subtype-3 (BRS-
CC 3), BB4 and BB5. The peptides of the invention are useful for modulating
CC receptors to which they have an affinity including receptors in the
CC gastrointestinal tract, the central nervous system, testes and uterus.
CC The sequences are therefore used in the treatment of cancers such as
CC small cell lung cancer. This sequence represents a cDNA encoding the frog
CC BB4 receptor

XX
XX New composition comprising two or more isolated polypeptides, useful for

PT preparing a medicament for treating pain in an animal.
XX
PS Claim 1; Page; 1017pp; English.
XX
XX The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regularly
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT New isolated nucleic acid detection reagent for detecting 1000 or more
PT genes from Drosophila and for elucidating cell signaling and cell-cell
PT interactions.
XX
XX
PS Claim 1; SEQ ID NO 29912; 21pp + Sequence Listing; English.
XX
CC The invention relates to an isolated nucleic acid detection reagent
CC capable of detecting 1000 or more genes from Drosophila. The invention is
CC useful in developmental biology and in elucidating cell signalling and
CC cell-cell interactions in higher eukaryotes for the development of
CC insecticides, therapeutics and pharmaceutical drugs. The invention
CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
CC sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
CC ABB72072). The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly

 /note="Vector: lambda ZAP Express/pBK-CMV; Site 1: EcoRI
 (5' adaptor); Site 2: XhoI (3' linker primer); The mixed
 organ cDNA library was generated using the ZAP-cDNA method
 by Stratagene. First strand cDNA synthesis was primed with
 a 50 bp linker primer containing an oligo dT sequence
 preceded by a synthetic XhoI site. 5 prime adaptors were
 used containing an EcoRI cohesive end. The finished cDNAs
 were inserted in to the ZAP express vector
 unidirectionally in the sense orientation with respect to
 the lacZ promoter of pBK-CMV. An amplified library was
 prepared from approximately 3 million primary clones in
 the lambda ZAP Express vector. In vivo excision was then
 used to generate individual pBK-CMV phagemid clones for
 EST sequencing."

/note="Vector: pCMV-SPORT6 (Invitrogen); Site 1: SalI;
Site 2: NotI; Mouse cDNA project by the Laboratory of
Genetics, National Institute on Aging (NIA), Intramural
Research Program, NIH (http://igsun.grc.nia.nih.gov/cDNA).
This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total
RNAs were obtained from Dr. Mark G. Carter (NIH/NIA-IRP).
EG cells were cultured at 37 C, 5% CO2 in DMEM
supplemented with 15% ES cell-qualified FBS, 0.1mM
non-essential amino acids, 2 mM glutamine,
penicillin/streptomycin, 1 mM sodium pyruvate, 0.1 mM
beta-mercaptoethanol, and 1000000 units of LIF per liter.
Double-stranded cDNAs were synthesized with an Oligo(dT)

primer [Invitrogen:
5'-pGACTAGTCTAGATCGGAGCGCGCCCTTTT-3'] from
2.5 ug of total RNA, treated with T4 DNA polymerase, and
purified by ethanol-precipitation. The cDNAs were ligated
to lone-linker Lu-Sal4, purified by phenol/chloroform, and
separated from free linkers by Centricon 100. Then, the
cDNAs were amplified by long-range high fidelity PCR using
Ex Taq polymerase (Takara) with a primer Sal4-S. The
products were purified by phenol/chloroform and Centricon
100. The cDNAs were digested with SalI and NotI enzymes
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid
vector. The DH10B E. coli host was transformed with the
ligation mixture by the standard chemical method. The
average insert size is about 4.0 kb. The library was
constructed by Yulan Piao."

/note="Organ: Stomach; Vector: pTZ18RP1; Site 1: EcoRI;
Site 2: NotI; The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tobacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including EcoR

I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dt-selected mRNA by
priming with dt-tailed vector. The dt-tailed vector was
adjusted to have about 60nt. The cDNA vector was

circularized with E. coli DNA ligase after digestion of

EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli Top10F by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."

DEFINITION

CX846858 313 bp mRNA linear EST 02-FEB-2005

JGI_CAAK12911.rev NIH XGC tropBn3 Xenopus tropicalis cDNA clone

IMAGE:7793462 3', mRNA sequence.

ACCESSION CX846858

VERSION CX846858.1 GI:58502125

KEYWORDS EST.

SOURCE Xenopus tropicalis (western clawed frog)

ORGANISM Xenopus tropicalis

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Amphibia; Batrachia; Anura; Mesobatrachia; Pipidae; Pipidae;

Xenopodinae; Xenopus; Silurana.

1 (bases 1 to 313)

Tissue Procurement: Timothy Grammer (Richard M. Harland Laboratory,

University of California, Berkeley:

<http://tropicalis.berkeley.edu/home>

cDNA Library Preparation: DOE Joint Genome Institute:

<http://www.jgi.doe.gov>

DNA Sequencing: DOE Joint Genome Institute: <http://www.jgi.doe.gov>

Clone Distribution: I.M.A.G.E. Consortium/LLNL:

<http://image.llnl.gov>

Naming Conventions: EST name is generated by the concatenation of

the JGI Clone id and the direction of sequencing. The suffix 'rev'

indicates a reverse sequencing read of the insert. It does not

necessarily reflect the orientation of the insert.

Poly-A: Based upon the presence of a run of 14 or more T residues

at the beginning of the sequence, this clone was polyadenylated.

The resulting Poly-T sequence has been removed.

Plate: CAAK 0133 row: m column: 12
High quality sequence stop: 311
POLYA=Yes.

 /note="Vector: pCMVSPORT6; Site_1: SalI; Site_2: NotI;
 This library was made from dr primed cDNA and cloned into
 Invitrogen pCMVSPORT6 vector. The work was done at DOE
 Joint Genome Institute. Poly A RNA were primed with 5',
 GACTAGTCTAGATCGCAG CGGCGCCCTTTT TTTT 3'. cDNA
 were ligated to SalI adapter (5' TCGACCCACGCGTCCG and
 5'CGACGCGTGGG), digested with NotI, size fractionated in
 1.1% agarose gel electrophoresis and ligated into NotI and
 SalI digested pCMVSPORT6 vector."

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information
Center project name: GIRU
Center clone name: CH230-185F19
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 184743 bases at least Q40
Consensus quality: 185828 bases at least Q30
Consensus quality: 186720 bases at least Q20
Estimated insert size: 189327; sum-of-contigs estimation
Quality coverage: 9x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

Rat Genome Sequencing Consortium.	
Direct Submission	
Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA	
On May 13, 2003 this sequence version replaced gi:24942563.	
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated

AUTHORS TITLE JOURNAL

COMMENT

Rat Genome Sequencing Consortium.
 Direct Submission
 Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
 of Molecular and Human Genetics, Baylor College of Medicine, One
 Baylor Plaza, Houston, TX 77030, USA
 On Nov 20, 2002 this sequence version replaced gi:23908470.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

----- Genome Center
 Center: Baylor College of Medicine
 Center code: BCM
 Web site: http://www.hgsc.bcm.tmc.edu/
 Contact: hgsc-help@bcm.tmc.edu
 ----- Project Information
 Center project name: KBRQ
 Center clone name: CH230-425P24
 ----- Summary Statistics
 Assembly program: Phrap; version 0.990329
 Consensus quality: 295693 bases at least Q40
 Consensus quality: 301215 bases at least Q30
 Consensus quality: 304883 bases at least Q20
 Estimated insert size: 295566; sum-of-contigs estimation
 Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

 * NOTE: Estimated insert size may differ from sequence length
 * (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
 * NOTE: This sequence may represent more than one clone.
 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 9 contigs. The true order of the pieces
 * is not known and their order in this sequence record is
 * arbitrary. Gaps between the contigs are represented as
 * runs of N, but the exact sizes of the gaps are unknown.
 * This record will be updated with the finished sequence
 * as soon as it is available and the accession number will
 * be preserved.

1 31755: contig of 31755 bp in length
 * 31756 31855: gap of unknown length
 * 31856 60925: contig of 29070 bp in length
 * 60926 61025: gap of unknown length
 * 61026 64397: contig of 3372 bp in length
 * 64398 64497: gap of unknown length
 * 64498 130320: contig of 65823 bp in length
 * 130321 130420: gap of unknown length
 * 130421 146576: contig of 16156 bp in length
 * 146577 146676: gap of unknown length
 * 146677 157802: contig of 11126 bp in length
 * 157803 157902: gap of unknown length
 * 157903 346082: contig of 188180 bp in length
 * 346083 346182: gap of unknown length
 * 346183 347276: contig of 1094 bp in length
 * 347277 347376: gap of unknown length
 * 347377 348540: contig of 1164 bp in length.

MAPPED CLONE OVERLAP: pDJ59m18 and 6-109h6.
 IMPORTANT: This submission contains the entire insert of clone pDJ1082L12. pDJ1082L12 comes from a PAC library constructed at the Roswell Park Cancer Institute by the Pieter de Jong group. This clone has been finished according to strict quality criteria and attempts have been made to resolve all base calling problems such as compressions and repetitive elements. The expected Phred/Phrap calculated errors/10kb is 0.39. In addition, this sequence has been finished such that 99.9% of consensus base calls consist of either double-stranded coverage or 2 types of labeling chemistry on one strand.

COMMENT
On Jul 23, 1998 this sequence version replaced gi:3057010.
IMPORTANT: This submission contains the entire insert of clone
pDJ59m18. pDJ59m18 comes from a PAC library constructed at the
Roswell Park Cancer Institute by the Pieter de Jong group. This
clone has been finished according to strict quality criteria and
attempts have been made to resolve all base calling problems such
as compressions and repetitive elements. The expected Phred/Phrap
calculated errors/10kb is 0.40. In addition, this sequence has
been finished such that 99.9% of consensus base calls consist of
either double-stranded coverage or 2 types of labeling chemistry on
one strand.
NOTE: Extent of pDJ59m18 overlap with mapped clones; SP6 PAC
Cloning end: 1. 8775. pDJ1082Li2.
Further information regarding the map of this region or annotation
of pDJ59m18 can be found at http://gestec.swmed.edu/chromos2.htm.
CHROMOSOMAL LOCUS: This PAC clone comes from the Chromosome 11p14.3
Usher(USH1C) syndrome region mapped between STSs D11S1310 and
1115A14.
```

MARKER CONFIRMATION: STS D11S1310 and SHGC-19182 sequence confirmed
MAPPED CLONE OVERLAP: pDJ1082L12 and 6-130a9.

Fax:81-438-52-3934)

COMMENT

* NOTE: This is a 'working draft' sequence. It currently
* consists of 17 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 4679: contig of 4679 bp in length
* 4680 4779: gap of unknown length
* 4780 6066: contig of 1287 bp in length
* 6067 6166: gap of unknown length
* 6167 8356: contig of 2190 bp in length
* 8357 8456: gap of unknown length
* 8457 11229: contig of 2773 bp in length
* 11230 11329: gap of unknown length
* 11330 14861: contig of 3532 bp in length
* 14862 14961: gap of unknown length
* 14962 17757: contig of 2796 bp in length
* 17758 17857: gap of unknown length
* 17858 22893: contig of 4836 bp in length
* 22894 22793: gap of unknown length
* 22794 27233: contig of 4440 bp in length
* 27234 27333: gap of unknown length
* 27334 31851: contig of 4518 bp in length
* 31852 38853: contig of 6902 bp in length
* 38854 38953: gap of unknown length
* 38954 45565: contig of 6612 bp in length
* 45566 45665: gap of unknown length
* 45666 52253: contig of 6588 bp in length
* 52254 52353: gap of unknown length
* 52354 58364: contig of 6011 bp in length

JOURNAL	Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
COMMENT	Clone requests: clonerequest@sanger.ac.uk On Jun 21, 2002 this sequence version replaced gi:21217881. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX CTD-2338C19 is from the Caltech genomic sperm BAC library D. VECTOR: pBelOBAC11
	----- Genome Center Center: Wellcome Trust Sanger Institute Center code: SC Web site: http://www.sanger.ac.uk Contact: vega@sanger.ac.uk ----- This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT

* NOTE: This is a 'working draft' sequence. It currently
* consists of 14 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

COMMENT

On Nov 19, 2002 this sequence version replaced gi:23195195.
 The sequence in this assembly is a combination of BAC based reads
 and whole genome shotgun sequencing reads assembled using Atlas
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
 in the feature table below represents a scaffold in the Atlas
 assembly (a 'contig-scaffold'). Within each contig-scaffold,
 individual sequence contigs are ordered and oriented, and separated
 by sized gaps filled with Ns to the estimated size. The sequence
 may extend beyond the ends of the clone and there may be sequence
 contigs within a contig-scaffold that consist entirely of whole
 genome shotgun sequence reads. Both end sequences and whole genome
 shotgun sequence only contigs will be indicated in the feature
 table.

ORIGIN	77.6%; Score 19.4; DB 5; Length 2124; Best Local Similarity 95.2%; Pred. No. 3.4e+02; Matches 20; Conservative 0; Mismatches 1; Indels 0; Gaps 0;	COMMENT	During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Swi: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted. Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-218C17 is from a CHORI-211 BAC library VECTOR: pTABAC2.1.

Contact: mouse@har.mrc.ac.uk

COMMENT

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has

a phred quality of at least 30.
Rp23-277B9 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBAC3.6.

to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

Tel: 6172580933
Fax: 6172580903
Email: mczody@broad.mit.edu
Primer A: No sequence submitted
Primer B: No sequence submitted
STS size: 988
Protocol:
23,021,928 chimpanzee whole genome shotgun reads were aligned to
the Human genome NCBI
Build 34 (hg16,July 2003). Chimp WGS reads were from 9 donors,
including Clint (Pan
troglodytes verus), 3 other Pan troglodytes verus chimps
(Donald,Karlien,Yvonne), 3 Pan
troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps
of unknown origin
(Gon,Unknown Chimp). Common names: Pan troglodytes verus is the
western chimp and Pan
troglodytes troglodytes is the central chimp. To be included in
chimpanzee SNP discovery, a
read must be at least 500bp in length, at least 50% of its base
calls must have Phred

score >= 20, at least 30% of its base calls must satisfy SNOS(30,25)(single strand NQS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

Consensus quality: 157076 bases at least Q40
Consensus quality: 160029 bases at least Q30
Consensus quality: 161054 bases at least Q20
Insert size: 158000; agarose-fp
Quality coverage: 4.9 in Q20 bases; agarose-fp
Quality coverage: 4.7 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 11 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 193: contig of 193 bp in length
* 194 293: gap of 100 bp
* 294 1492: contig of 1199 bp in length
* 1493 1592: gap of 100 bp
* 1593 2731: contig of 1139 bp in length
* 2732 2831: gap of 100 bp
* 2832 6919: contig of 4088 bp in length
* 6920 7019: gap of 100 bp
* 7020 11262: contig of 4243 bp in length
* 11263 11362: gap of 100 bp
* 11363 23705: contig of 12343 bp in length
* 23706 23805: gap of 100 bp
* 23806 46137: contig of 22332 bp in length
* 46138 46237: gap of 100 bp
* 46238 66133: contig of 19896 bp in length
* 66134 66233: gap of 100 bp
* 66234 91720: contig of 25486 bp in length
* 91720 91819: gap of 100 bp
* 91820 119835: contig of 28016 bp in length
* 119836 119935: gap of 100 bp
* 119936 163328: contig of 43393 bp in length.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Claim 1; Page 9-16; 24pp; English.
XX
XX This sequence encodes the rat Kv3.1 alpha-subunit. Kv3.1 is a voltage-
gated potassium channel which is predominantly located within a subset of
GABAergic interneurons within the brain, namely the parvalbumin-
containing interneurons. Its function is to allow fast repolarisation of
the cells and thus, contributes to the fast-firing phenotype of these
neurons. Parvalbumin expression has been shown to be altered within the
prefrontal cortex in schizophrenia. There are two alternative splice
variants of the Kv3.1 alpha-subunit, Kv3.1a and Kv3.1b, with each variant
only differing at the intracellular C-terminal. The Kv3.1 alpha-subunit
polynucleotide and polypeptide are useful for diagnosing schizophrenia,
and for identifying compounds that modulate the expression of the
polypeptide or polynucleotide, or the activity of Kv3.1. They are also
useful for the identification of subjects who are predisposed to
schizophrenia, and for evaluating the efficacy of drugs for such
disorder, and monitoring the progress of patient symptoms involved in
clinical trials for the treatment of such disorder.

XX
XX New polynucleotides and polypeptides, useful for diagnosing
XX schizophrenia, and for identifying a compound modulating the activity of
XX Kv3 channels.
XX
XX Claim 1; SEQ ID NO 1; 50pp; English.
XX
XX The invention relates to the use of a polynucleotide comprising a
XX sequence of 3977, 2441 or 3410 base pairs, fully defined in the
XX specification, its fragment or complement, for diagnosis or treating
XX schizophrenia. The invention also claims a method for screening for a
XX compound regulating the expression of the polynucleotide comprising: (a)
XX bringing a test compound into contact with a cell capable of expressing
XX the polynucleotide, whose expression is desired to be controlled; (b)
XX detecting the expression of the polypeptide in the cell; and (c)
XX determining a compound promoting or suppressing the expression of the
XX polypeptide compared to a control. The polynucleotides and polypeptides
XX are useful for diagnosing schizophrenia, and for identifying a compound
XX modulating the activity of Kv3 channels. They are also useful for the
XX identification of subjects who are predisposed to schizophrenia, and for
XX evaluating the efficacy of drugs for such disorder, and monitoring the
XX progress of patient symptoms involved in clinical trials for the
XX treatment of such disorder. This sequence corresponds to the gene for rat
XX voltage-gated potassium channel Kv3.1.

XX
XX Combination of polynucleotide probes, useful as array elements in a
XX microarray for monitoring the expression of a number of target
XX polynucleotides.
XX
XX Claim 1; SEQ ID NO 1010; 65pp; English.
XX
XX The invention relates to a combination which, comprises a number of
XX polynucleotide probes comprising a sequence selected from one of the 1490
XX sequences mentioned in the specification. The combination is useful as an
XX array element in a microarray for monitoring the expression of a number
XX of target polynucleotides. The microarray is particularly useful in the
XX diagnosis and treatment of cancer and immunopathology and neuropathology.
XX The microarray is useful in diagnostics and treatment regimens, drug
XX discovery and development, toxicological and carcinogenicity studies,
XX forensics and pharmacogenomics. The microarray is also useful for
XX monitoring progression of diseases and for developing sophisticated
XX profiles for the effects of currently available therapeutic drugs. The
XX combination is also useful for purifying a subpopulation of mRNAs, CDNAS
XX and genomic fragments and in research and diagnostic applications. The
XX array can detect changes in expression in a large number of genes coding
XX for different signalling pathway populations which can be used to diagnose
XX various diseases including cancer e.g. adenocarcinoma and leukaemia,
XX immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease
XX and Parkinson's disease. The present sequence represents a polynucleotide
XX probe of the invention. Note: The sequence data for this patent did not

XX
XX New composition comprising polynucleotide probes, useful as array
PT elements in a microarray for monitoring the expression of target
PT polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic
PT fragments.
XX
XX Claim 6; SEQ ID NO 1010; 73bp; English.
XX
XX The invention relates to a composition of polynucleotide probes
CC comprising first polynucleotide probes comprising at least a portion of a
CC gene encoding a receptor-like polypeptide, second polynucleotide probes
CC comprising at least a portion of a gene encoding a transducing
CC polypeptide and third polynucleotide probes comprising at least a portion
CC of a gene encoding an effector-like polypeptide. The probes of the
CC composition are useful as array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray is useful in the
CC diagnosis and treatment of cancer, an immunopathology or a
CC neuropathology. It can also be used for drug discovery and development,
CC toxicological and carcinogenicity studies, forensics or pharmacogenomics.
CC Microarrays can also be used for monitoring the progression of diseases
CC that may be associated with the altered expression of signalling pathway
CC polypeptides. The composition can also be used to purify a subpopulation
CC of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile
CC is also useful for the diagnosis and treatment of cancer, e.g. cancers of
CC the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix,
CC an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or
CC ulcerative colitis, or a neuropathology, e.g. dementia, amnesia,
CC epilepsy, Alzheimer's disease or depression. This sequence represents a
CC human polynucleotide probe of the invention. Note: The sequence data for
CC this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

XX (HUMA-) HUMAN GENOME SCI INC.
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-541565/60.
XX P-PSDB; ABB14702.
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,
XX useful for preventing, diagnosing and/or treating nervous system cancers
XX and metastases.
XX Claim 1; SEQ ID NO 35; 1701pp + Sequence Listing; English.
XX The invention relates to novel genes (AB11004-ABA1534) and proteins
XX (AB114678-AB18001) useful for preventing, treating or ameliorating
XX medical conditions e.g. by protein or gene therapy. The genes are
XX isolated from a range of human tissues disclosed in the specification.
XX The nucleic acids, proteins, antibodies and (ant)agonists are useful in
XX the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
XX ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
XX breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
XX disorders e.g. Addison's disease, allergies, diabetes mellitus, Crohn's disease,
XX anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
XX multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
XX cardiovascular disorders such as myocardial ischaemia; (d) wound healing
XX ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
XX infectious diseases such as viral, bacterial, fungal and parasitic
XX infections. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides,
useful for preventing, diagnosing and/or treating nervous system cancers
and metastases.

XX

PS Disclosure; SEQ ID NO 6731; 1701pp + Sequence Listing; English.

XX The invention relates to novel genes (ABAI1004-ABA21534) and proteins

CC (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating

CC medical conditions e.g. by protein or gene therapy. The genes are

CC isolated from a range of human tissues disclosed in the specification.

CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in

CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

CC ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow,

CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune

CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic

CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)

CC cardiovascular disorders such as myocardial ischaemia; (d) wound healing

CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)

CC infectious diseases such as viral, bacterial, fungal and parasitic

CC infections. Note: The sequence data for this patent did not form part of

CC the printed specification, but was obtained in electronic format directly

CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

(HUMA-) HUMAN GENOME SCI INC.
Rosen CA, Barash SC, Ruben SM;
WPI; 2001-541565/60.
Nucleic acids encoding 3224 human nervous system antigen polypeptides,
useful for preventing, diagnosing and/or treating nervous system cancers
and metastases.
Disclosure; SEQ ID NO 7692; 1701pp + Sequence Listing; English.
The invention relates to novel genes (ABAI1004-ABA21534) and proteins
(ABBI4678-ABBI8001) useful for preventing, treating or ameliorating
medical conditions e.g. by protein or gene therapy. The genes are
isolated from a range of human tissues disclosed in the specification.
The nucleic acids, proteins, antibodies and (ant)agonists are useful in
the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow,
breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
disorders e.g. Addison's disease, allergies, autoimmune haemolytic
anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
cardiovascular disorders such as myocardial ischaemia; (d) wound healing
; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)

CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 PT New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.
 XX
 PS Claim 14; SEQ ID NO 34587; 1766pp; English.
 XX
 CC The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing of the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-required gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target
 CC prokaryotic essential genes. Note: The sequence data for this patent did
 CC not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

XX Nucleic acids encoding polypeptides from Staphylococcus epidermidis,
PT useful for vaccinating against infections, e.g. endocarditis.
PT
XX
XX Claim 8; Page 414-415; 2188pp; English.
PS
XX
XX AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides
CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I)
CC and (II) can have antibacterial activity and therefore can be used in
CC vaccination. The nucleic acids (I) may be used to produce the S.
CC epidermidis polypeptides (II) via the production of vectors containing
CC them which are used to produce hosts cells which express the
CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be
CC used to vaccinate subjects and to raise antibodies against the bacteria.
CC The polypeptides may also be used to assay for other inhibitors of their
CC activity and therefore identify compounds that may be used for the
CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to
CC AAH5090 represent specifically claimed S. epidermidis genomic DNA
CC polynucleotide sequences from the present invention. AAH55091 to AAH5098
CC represent oligonucleotide sequences and primers which are used in the
CC exemplification of the present invention. N.B. The present invention
CC specifically claims all the polynucleotide sequences given in the
CC sequence listing of the present specification, however the sequence
CC listing only goes up to SEQ ID NO:4454 so even though sequences are given
CC in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present
CC for SEQ ID NO:4455 to 4464

CC markers for spermatogonial cells, for identifying genes or proteins
CC characteristic of male infertility, diagnosing or aiding in the diagnosis
CC of infertility in men, and for contraception in which sperm production or
CC sperm count is reduced or defective sperm is produced. Antibodies to
CC reproductive-specific proteins are useful for determining the presence of
CC these proteins in a sample obtained from a man being assessed for
CC infertility, for identifying the expression of genes in particular cell
CC type or particular developmental stage, for studies of spermatogenesis,
CC and for immunofluorescence of germ cells or in Western blots for
CC assessing the presence of the protein the antibody binds. The sequences
CC of the invention are also useful for treating disorders of reduced sperm
CC count, and for increasing sperm count and/or sperm activity. The nucleic
CC acids of the invention are useful in gene therapy. AAS13648-AAS13671
CC represent nucleic acid sequences encoding for the human reproduction-
CC specific proteins of the present invention

PT
XX Claim 1; Page; 1017pp; English.
XX
XX The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC injury (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene
CC injury (CCI) and spared nerve injury (SNI)) in a human DNA (shown in Table 2 of the
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
PS Claim 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
or human polynucleotides or a polynucleotide which represents a fragment,
derivative or allelic variation of the nucleic acid sequence. Also
claimed are a vector comprising the novel polynucleotide, a host cell
comprising the vector, a method for identifying a nucleotide sequence
which is differentially regulated in an animal subjected to pain and a
kit to perform the method, an array, a method for identifying an agent
that increases or decreases the expression of the polynucleotide sequence
that is differentially expressed in neuronal tissue of a first animal
subjected to pain, a method for identifying a compound which regulates
the expression of a polynucleotide sequence which is differentially
expressed in an animal subjected to pain, a method for identifying a
compound that regulates the activity of one or more of the
polynucleotides, a method for producing a pharmaceutical composition, a
method for identifying a compound or small molecule that regulates the
activity in an animal of one or more of the polypeptides given in the
specification, a method for identifying a compound useful in treating
pain and a pharmaceutical composition comprising the one or more
polypeptides or their antibodies. The polynucleotide or the compound that
modulates its activity is useful for preparing a medicament for treating
pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene

XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.

XX Claim 1; SEQ ID NO 160; Opp; English.

XX The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcino Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcino Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

XX Determining susceptibility of an individual to joint space narrowing,
PT osteophyte development and/or joint pain comprises identifying whether
PT the individual has at least one polymorphism in a polynucleotide encoding
PT a protein.

XX Disclosure; SEQ ID NO 387; 297pp; English.

XX The invention relates to a method of determining susceptibility of an
CC individual to joint space narrowing and/or osteophyte development and/or
CC joint pain comprising identifying whether the individual has at least one
CC polymorphism in a polynucleotide encoding at least one of the protein
CC listed in the specification. The methods, composition and agent are
CC useful for modulating the susceptibility of an individual to joint space
CC narrowing and/or osteophyte development and/or joint pain that is
CC associated with a disease, preferably osteoarthritis. The cell line and
CC the non-human animal are useful for screening for an agent for diagnosing
CC an individual having susceptibility to joint space narrowing and/or
CC osteophyte development and/or joint pain. This sequence corresponds to
CC the polynucleotide encoding a protein listed in the specification. (Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences).

PT Determining the degree of cytosine methylation in genomic DNA, useful for
PT diagnosis and prognosis, comprises selective hybridization of amplicons
PT from chemically treated DNA.
XX
PS Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on
CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's); and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. ABQ13410-
CC ABQ54121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

XX XX New antisense nucleic acids, useful for identifying proteins or screening

XX PT for homologous nucleic acids required for cellular proliferation to

XX PT isolate candidate molecules for rational drug discovery programs.

XX XX Claim 14; SEQ ID NO 12160; 1766pp; English.

XX XX The invention relates to an isolated nucleic acid comprising any one of

XX CC the 6213 antisense sequences given in the specification where expression

XX CC of the nucleic acid inhibits proliferation of a cell. Also included are:

XX CC (1) a vector comprising a promoter operably linked to the nucleic acid

XX CC encoding a polypeptide whose expression is inhibited by the antisense

XX CC nucleic acid; (2) a host cell containing the vector; (3) an isolated

XX CC polypeptide or its fragment whose expression is inhibited by the

XX CC antisense nucleic acid; (4) an antibody capable of specifically binding

XX CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

XX CC proliferation or the activity of a gene in an operon required for

XX CC the gene product or that has an activity against a biological pathway

XX CC required for proliferation, or that inhibits cellular proliferation; (8)

XX CC identifying a gene required for cellular proliferation or the biological

XX CC pathway in which a proliferation-required gene or its gene product lies

XX CC or a gene on which the test compound that inhibits proliferation of an

XX CC organism acts; (9) manufacturing an antibiotic; (10) profiling a

XX CC compound's activity; (11) a culture comprising strains in which the gene

XX CC product is overexpressed or underexpressed; (12) determining the extent

XX CC to which each of the strains is present in a culture or collection of

XX CC strains; or (13) identifying the target of a compound that inhibits the

XX CC proliferation of an organism. The antisense nucleic acids are useful for

XX CC identifying proteins or screening for homologous nucleic acids required

XX CC for cellular proliferation to isolate candidate molecules for rational

XX CC drug discovery programs, or for screening homologous nucleic acids

XX CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,

XX CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target

XX CC prokaryotic essential genes. Note: The sequence data for this patent did

XX CC not form part of the printed specification, but was obtained in

XX CC electronic format directly from WIPO at

XX
XX New genome of Legionella pneumophila Paris strain and derived
PT polypeptides, useful for detection or identification of the strain and
PT for treatment and prevention of infections.
XX
XX Claim 1; SEQ ID NO 48; 660pp; English.
XX
XX The invention relates to an isolated or purified nucleotide sequences (I)
CC from Legionella pneumophila Paris strain. (II), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC (hybrid) polypeptides (II). (II) are also useful for preparation of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or
CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by L.
CC pneumophila. The present sequence represents a L. pneumophila DNA.

XX
XX New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
XX Claim 1; SEQ ID NO 26833; 44pp; English.
XX
XX The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversity, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

 XX
 PT Isolated polypeptide for treating, preventing and/or prognosing
 PT disorders related to the respiratory system including respiratory cancers
 PT and also for testing and detection e.g. diagnosis.
 XX
 XX Disclosure; SED ID No 1132; 546pp; English.
 PS
 XX The present invention relates to the isolation of novel human respiratory
 CC antigens (AAU17695-AAU17975), and cDNA and genomic sequences encoding for
 CC these polypeptides. The sequences of the invention are useful for
 CC preventing, treating and/or prognosing disorders related to the
 CC respiratory system including throat disorders (e.g. vocal cord paralysis,

CC tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic
 CC disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose
 CC disorders and cancers of the respiratory tissues e.g. lung cancer. The
 CC polynucleotide sequences of the invention are useful in gene therapy and
 CC antisense therapy. AAS28161-AAS28764 represent genomic sequences encoding
 CC for novel human respiratory antigens. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

 DR Novel respiratory system antigen and polynucleotides encoding the
 PT polypeptides, useful for treating diagnosing, treating or preventing
 PT tonsillitis, pneumonia, asthma and cystic fibrosis, emphysema, throat
 cancer.
 XX
 PS Disclosure; SEQ ID NO 1132; 236pp; English.
 XX
 CC The invention describes an isolated polypeptide (I) comprising an amino
 CC acid sequence that is at least 90% identical to polypeptide fragment of
 CC any one of 299 respiratory system antigen sequences (PS) and having
 CC biological activity, polypeptide domain or epitope of PS, full-length
 CC protein of PS, or variant, allelic variant or species homolog of PS. (I)
 CC or a polynucleotide (II) encoding (I) is also useful for diagnosing a
 CC pathological condition or a susceptibility to a pathological condition in
 CC a subject which involves determining the presence or absence of mutation
 CC in (II) or determining the presence or amount of expression of (I) in a
 CC biological sample and diagnosing a pathological condition based on the
 CC result. The human respiratory system associated polynucleotides, the
 CC polypeptides encoded by them, and antibodies that immunospecifically bind
 CC these polypeptides are useful in diagnosis, treatment, prevention and/or
 CC prognosis of disorders of respiratory system such as throat disorders
 CC (e.g., vocal cord paralysis, tonsillitis, and laryngitis), lung disorders
 CC (e.g., pneumonia), allergic disorders, (e.g., asthma and eosinophilic
 CC pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis,

CC sarcoidosis, nose disorders (rhinitis and sinusitis), neoplasms and/or
CC cancers of respiratory tissues (e.g., throat cancer, lung cancer, and
CC cancer of the nose). The polynucleotides are useful in gene therapy
CC techniques, for chromosome identification, identifying individuals from

PA (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Ruben SM, Barash SC;
PI WPI; 2003-765403/72.
XX
XX
XX New human respiratory system-related polypeptide and genes, useful for
PT treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic
PT fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or
PT sinusitis.
XX
XX Disclosure; SEQ ID NO 1132; 202pp; English.
XX
XX This invention is related to a novel isolated polypeptide, which
CC comprises a human respiratory system-related polypeptide, and the DNA
CC sequence which encodes it. The invention may be useful for the
CC development of compounds with an antiasthmatic, antibacterial,
CC antiinflammatory, cytostatic, antianaemic or antiallergic activity. In
CC addition, the sequences disclosed may be useful for gene therapy. The
CC polypeptide or polynucleotide is useful for treating, preventing or
CC ameliorating a medical condition, for example pneumonia, lung cancer,
CC cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia,
CC inflammations, sinusitis, chronic obstructive pulmonary disease or
CC infectious diseases. The polypeptide or polynucleotide is also useful for
CC diagnosing any of these diseases or a susceptibility to the disease. The
CC present sequence is that of a human DNA sequence which is related to a
CC human respiratory system associated gene of the invention.

XX
CC The invention relates to an isolated nucleic acid molecule (I) comprising
CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the
CC specification or its complement. (I) is useful for: (a) assessing whether
CC a patient is afflicted with prostate cancer; (b) monitoring the
CC progression of prostate cancer in a patient; (c) assessing the efficacy
CC of a test compound to inhibit prostate cancer in a patient; (d) assessing
CC the efficacy of a therapy for inhibiting prostate cancer in a patient;
CC (e) selecting a composition for inhibiting prostate cancer in a patient;
CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)
CC determining whether prostate cancer has metastasized in a patient; (h)
CC assessing the aggressiveness or indolence of prostate cancer in a patient
CC ; (i) is also useful as a pharmacodynamic or pharmacogenomic marker

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Ruben SM, Barash SC;

WPI; 2003-765403/72.

P-PSDB; ADI97096.

New human respiratory system-related polypeptide and genes, useful for treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or sinusitis.

Claim 1; SEQ ID NO 268; 202pp; English.

This invention is related to a novel isolated polypeptide, which comprises a human respiratory system-related polypeptide, and the DNA sequence which encodes it. The invention may be useful for the development of compounds with an antiasthmatic, antibacterial, antiinflammatory, cytostatic, antianaemic or antiallergic activity. In addition, the sequences disclosed may be useful for gene therapy. The polypeptide or polynucleotide is useful for treating, preventing or ameliorating a medical condition, for example pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, leukemia, leukaemia, inflammations, sinusitis, chronic obstructive pulmonary disease or

CC infectious diseases. The polypeptide or polynucleotide is also useful for
CC diagnosing any of these diseases or a susceptibility to the disease. The
CC present sequence is that of a respiratory system associated human gene of
CC the invention.

XX New antisense nucleic acids, useful for identifying proteins or screening
XX for homologous nucleic acids required for cellular proliferation to
XX isolate candidate molecules for rational drug discovery programs.

XX Claim 14; SEQ ID NO 41816; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
XX the 6213 antisense sequences given in the specification where expression
XX of the nucleic acid inhibits proliferation of a cell. Also included are:
XX (1) a vector comprising a promoter operably linked to the nucleic acid
XX encoding a polypeptide whose expression is inhibited by the antisense
XX nucleic acid; (2) a host cell containing the vector; (3) an isolated
XX polypeptide or its fragment whose expression is inhibited by the
XX antisense nucleic acid; (4) an antibody capable of specifically binding
XX the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
XX proliferation or the activity of a gene in an operon required for
XX proliferation; (7) identifying a compound that influences the activity of
XX the gene product or that has an activity against a biological pathway
XX required for proliferation, or that inhibits cellular proliferation; (8)
XX identifying a gene required for cellular proliferation or the biological
XX pathway in which a proliferation-required gene or its gene product lies
XX or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

CC the 58798 Cotton plant cDNA sequences mentioned in the specification.
CC Also a recombinant polypeptide comprising any of the 58798 amino acid
CC sequences mentioned in the specification and producing a plant having an
CC improved property. Producing a plant having an improved property
CC comprises transforming a plant with a recombinant construct comprising a
CC promoter region functional in a plant cell operably joined to a
CC polynucleotide comprising a coding sequence for a polypeptide associated
CC with the property, and growing the transformed plant. The polypeptide is
CC useful for improving plant cold tolerance, manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, improving plant
CC drought tolerance, providing increased resistance to plant disease,
CC producing galactomannan (or lignin or plant growth regulators), improving
CC plant heat tolerance, improving plant tolerance to herbicides, increasing
CC the rate of homologous recombination in plants, improving plant tolerance
CC to extreme osmotic conditions or to pathogens or pests, improving yield
CC by modification of photosynthesis, modifying seed oil or protein yield
CC and/or content, improving yield by modification of carbohydrate, nitrogen
CC or phosphorus use and/or uptake, or improving yield by providing improved
CC plant growth and development under at least one stress condition. The
CC polynucleotide and polypeptide may also be used in recombinant DNA
CC constructs, in physical arrays of molecules, as plant breeding markers,
CC or in computer-based storage and analysis systems. The present sequence
CC is a Cotton plant cDNA of the invention. NOTE: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?docID=20040181830. However only 6585
CC polynucleotide sequences were available, the remaining 52213
CC polynucleotides and all 58798 protein sequences were not present.

XX
CC The invention relates to a novel purified or isolated Cryptococcus
CC neoformans nucleic acid molecule comprising a sequence encoding a
CC polypeptide comprising a sequence not given in the specification. A
CC polynucleotide of the invention has fungicide activity, and may have a
CC use in gene therapy. The nucleic acid is useful for preparing a
CC composition for treating an infection caused by Cryptococcus neoformans.
CC The present sequence represents a C. neoformans sequence of the
CC invention. Note: The sequence data for this patent is not represented in
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pat_sequences.

XX XX New isolated or recombinant polypeptide for use in modulating a plant

PT growth trait in a flowering plant e.g. in Arabidopsis, Brassica, Zea, or

PT Oryza.

XX PS Claim 1; SEQ ID NO 12; 81pp; English.

XX CC The invention describes an isolated or recombinant polypeptide (I)

CC comprising a sequence: (a) comprising 1 of 30 sequences (S1), as given in

CC the specification, or a conservative variant; (b) encoded by 1 of 30

CC sequences (S2), as given in the specification, or a conservative variant;

CC (c) encoded by a sequence that hybridises under stringent conditions to

CC S2; and (d) encoded by a sequence 70 % identical to S2. The expression or

CC activity of (I) is modulated to modulate a plant growth trait in a

CC flowering plant, of the family Brassicaceae, preferably in a plant that

CC is Arabidopsis, Brassica, Zea, Oryza, Triticum, Hordeum, Lolium, Sorghum,

CC Glycine, Medicago, Helianthus, Lactuca, Beta, Vitis, Solanum,

CC Lycopersicon, Capsicum, Gossypium, Hevea, Linum, Prunus, Citrus, Populus,

CC Pinus, or Quercus. A new method is used to detect genes for a plant

CC growth trait. This sequence represents a plant growth associated cDNA.

CC The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC

CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized brain stems library cDNA library Preparation: M.B. Soares Lab Clone distribution: NIH-BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence: 180-217, >POLY_A\$implete
 Seq primer: M13 Forward
 POLYA=Yes.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized prefrontal cortex library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence:
169-206, >POLY A#Simple_repeat
Seq primer: M13 Forward
POLYA=yes.

/note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; The UI-R-CO library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-CO library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"

/note="Organ: brain; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; UI-M-DJ2 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is: GCTACATGAT, subfornical organ and area postrema.

 /clone_lib="Gm-r1088"
 /note="The library Gm-r1088 is a sequence-driven, reracked set of 9,216 low redundancy clones selected from cDNA libraries from various tissues and stages of development of soybean that consists of 2,706 cDNAs from germinating cotyledons (source library Gm-cl027); 1,355 cDNAs from immature seed coats (libraries Gm-cl019 and Gm-cl023); 917 cDNAs from tissue culture derived somatic embryos (source libraries Gm-cl036 and Gm-cl075); 3,275 cDNAs from germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-cl064, Gm-cl065, Gm-cl066, and Gm-cl067); and 963 cDNAs from young leaves exposed to bacterial and fungal pathogens (source libraries Gm-cl072, Gm-cl073, and Gm-cl074). The 5' ESTs of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked to form library Gm-r1088 and the cDNA clones of the reracked Gm-r1088 library were then sequenced at the 3' end. The unigene selection and 3' sequencing was funded by NSF Plant Genome project #9872565 (http://soybeanomics.crops.ci.uiuc.edu/) as part of creation of a low redundancy soybean cDNA set. The source cDNA libraries were constructed by the laboratories of Lila Vodkin, University of Illinois, Randy Shoemaker, Iowa State University, and Paul Keim, Northern Arizona University as part of the Public EST project, http://129.186.26.94/soybeanest.html. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://web.ahc.umn.edu/biodata/nfssoy/. Reracking and 3' sequencing were conducted by services of the University of Illinois Keck Center for Comparative and Functional Genomics http://www.biotech.uiuc.edu/keck.htm. Note: The library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."

 Clones approximating a minimum tiling path were re-arrayed from the library master plates prior to sequencing.
 For purposes of clone identification each clone name is a concatenation of the original clone location and its new location in the re-arrayed sequencing plates.
 Seq primer: GTAATACGACTCACTATAGGGC
 Class: BAC ends.

/note="Organ: Leaves; Vector: pCLD04541 (pBEL0BAC11 EcorI clones); Site: BctXI; Soybean (Glycine max (L.) Merr.) cv. Forrest seeds were grown in greenhouse for fourteen days. Nuclei were isolated and embedded in agarose, restriction digested with Hind III BamHI or EcoRI, large size DNA fragments were ligated in vector V41 (pCLD04541) and electro transformed in DH10a cells. About 90,000 clones from BAC libraries were fingerprinted with HindIII and Hae III. Version 2 (automatic build) Contigs were built from 78,001 fingerprints. Contigs were manually examined to find the best non redundant tile path through the contigs representing about 13,000 clones. The clones were end sequenced."

analysis were selected following oligonucleotide hybridization fingerprinting of arrayed clones from zebrafish late somitogenesis (26 ss), adult liver or embryonic shield stage (5, 6 h) libraries. Fingerprint data were used to computationally cluster cDNAs, and a single cDNA from each cluster was chosen for sequencing. In some cases multiple members of the same cluster were sequenced to assess clustering parameters or single clones were sequenced additional times to assess quality control."

This sequence was derived from the FAPESP Schistosoma mansoni EST

Genome Project. All sequences in the project were assembled and

annotated. This entry and all the assembled sequences can be seen

in the following URL <http://bioinfo.iq.usp.br/schisto/>

Plate: MM1-0024T-M079 row: 9 column: F.

/note="Organ: hearts; Vector: pBluescript II KS(+);
Site 1: EcoRI; Site 2: NotI. This normalized library was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
EcoRI, size-selected, and cloned into the NotI and EcoRI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."
